

## Invited Speakers

Bernard Asabere (Ghana)  
David Bacon (UK)  
Rennan Barkana (Israel)  
Celine Boehm (UK)  
Phillip Bull (USA)  
Tamara Davis (Australia)  
Nadir Hashim (Kenya)  
Nalini Heeralall-Issur (Mauritius)  
Gemma Janssen (Netherlands)  
Julien Larena (South Africa)  
Samaya Nissanke (Netherlands)  
Frans Pretorius (USA)  
Jonathan Pritchard (UK)  
Signe Riemer-Sørensen (Norway)  
Joe Silk (UK)  
Kurt Van Der Heyden (South Africa)

- **Cosmology and Dark Energy**
- **Cosmic Dawn and Reionisation**
- **Dark Matter and Astroparticle Physics**
- **Gravity and gravitational radiation**

## Fundamental Physics with the SKA - a summary

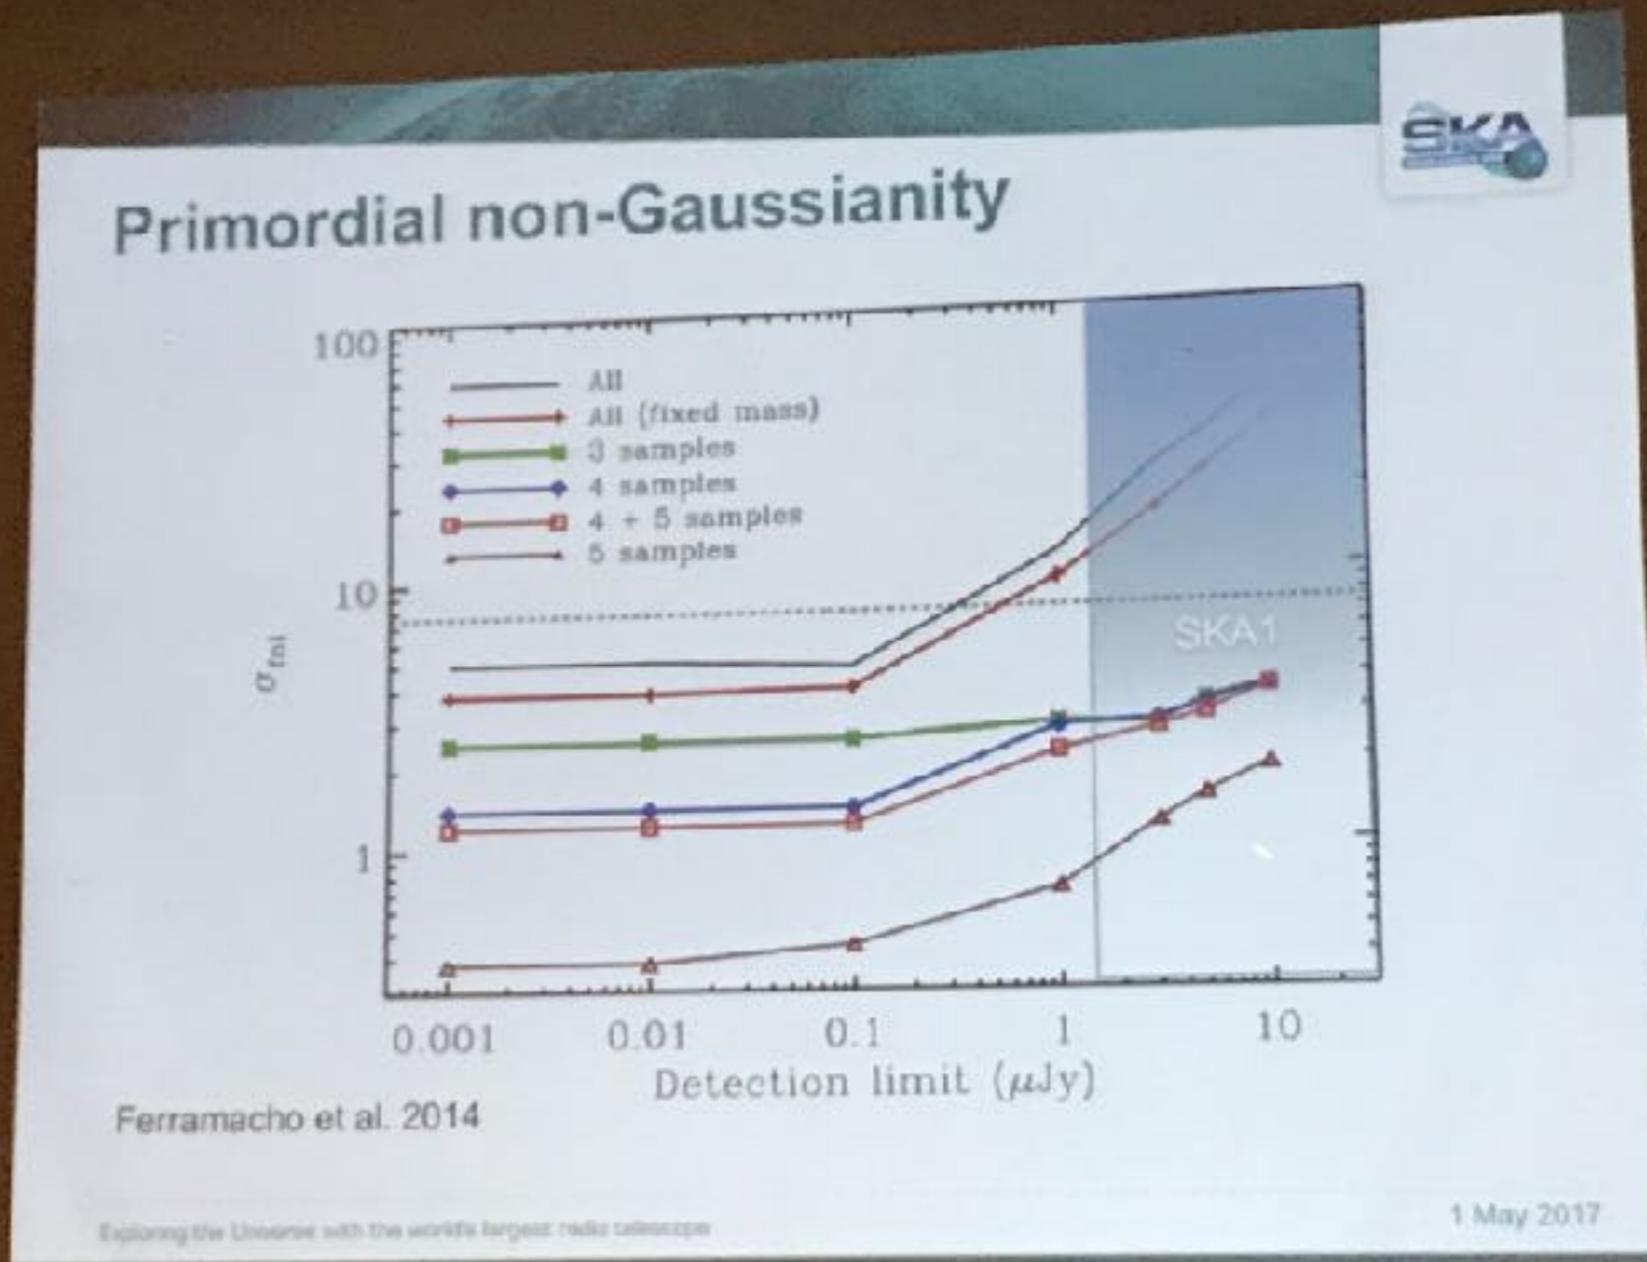

- ★ This is presented by someone who does not fully understand, or is working on, most of what is being talked about!
- ★ I am biased
- ★ This is incomplete... mostly..
- ★ It's brief...

# Testing predictions

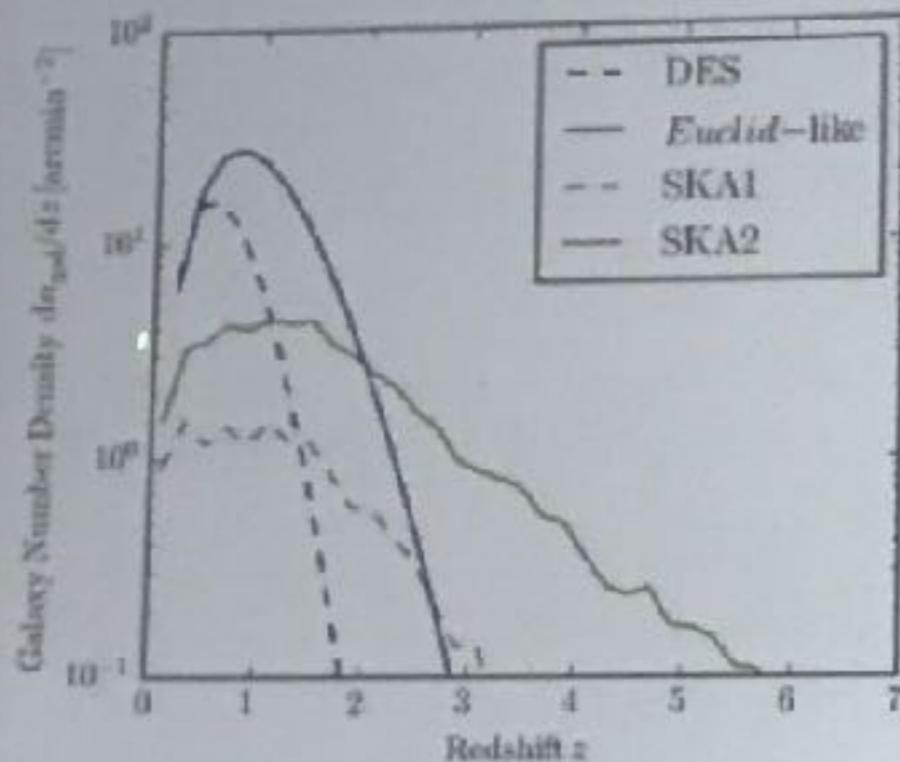

# Testing predictions

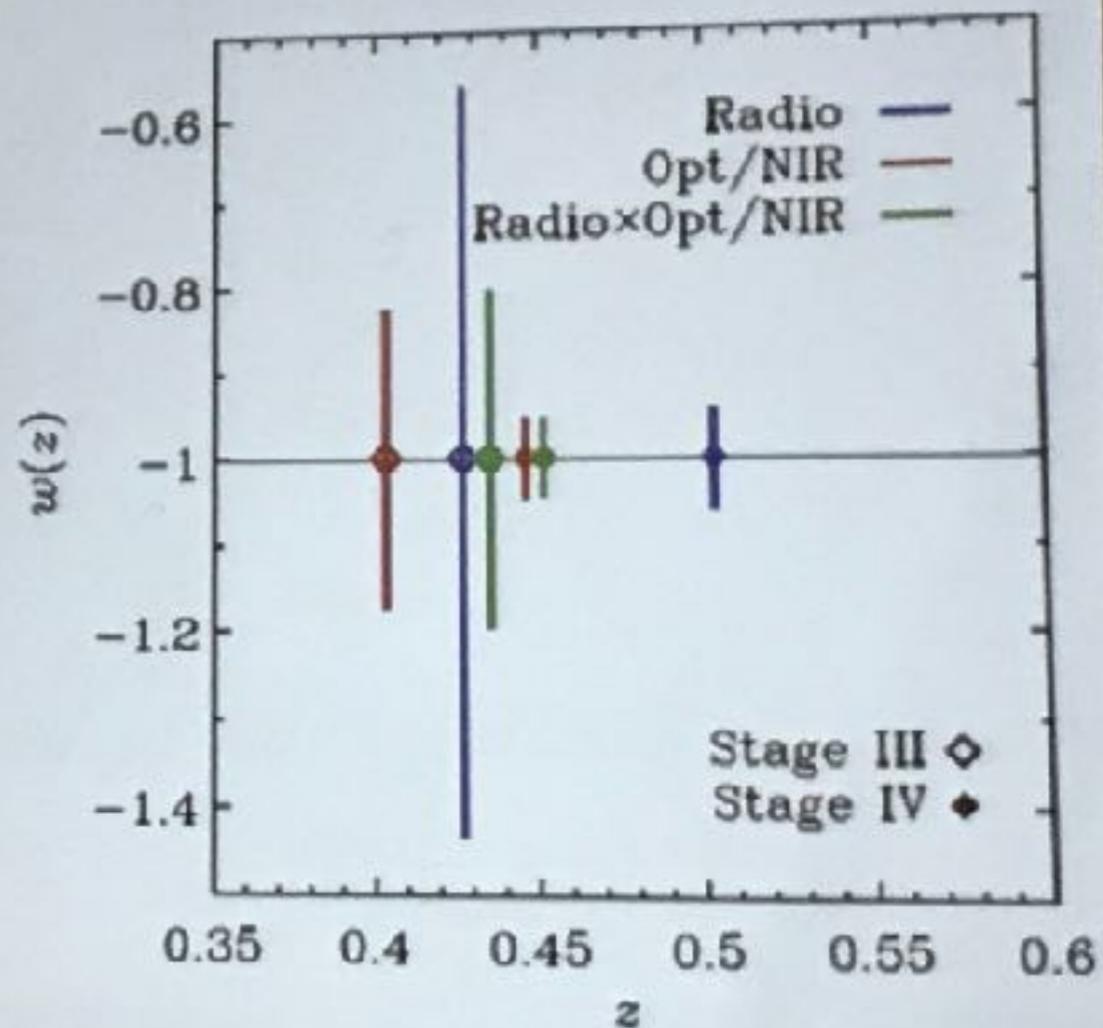

# Testing predictions

## Dark Energy

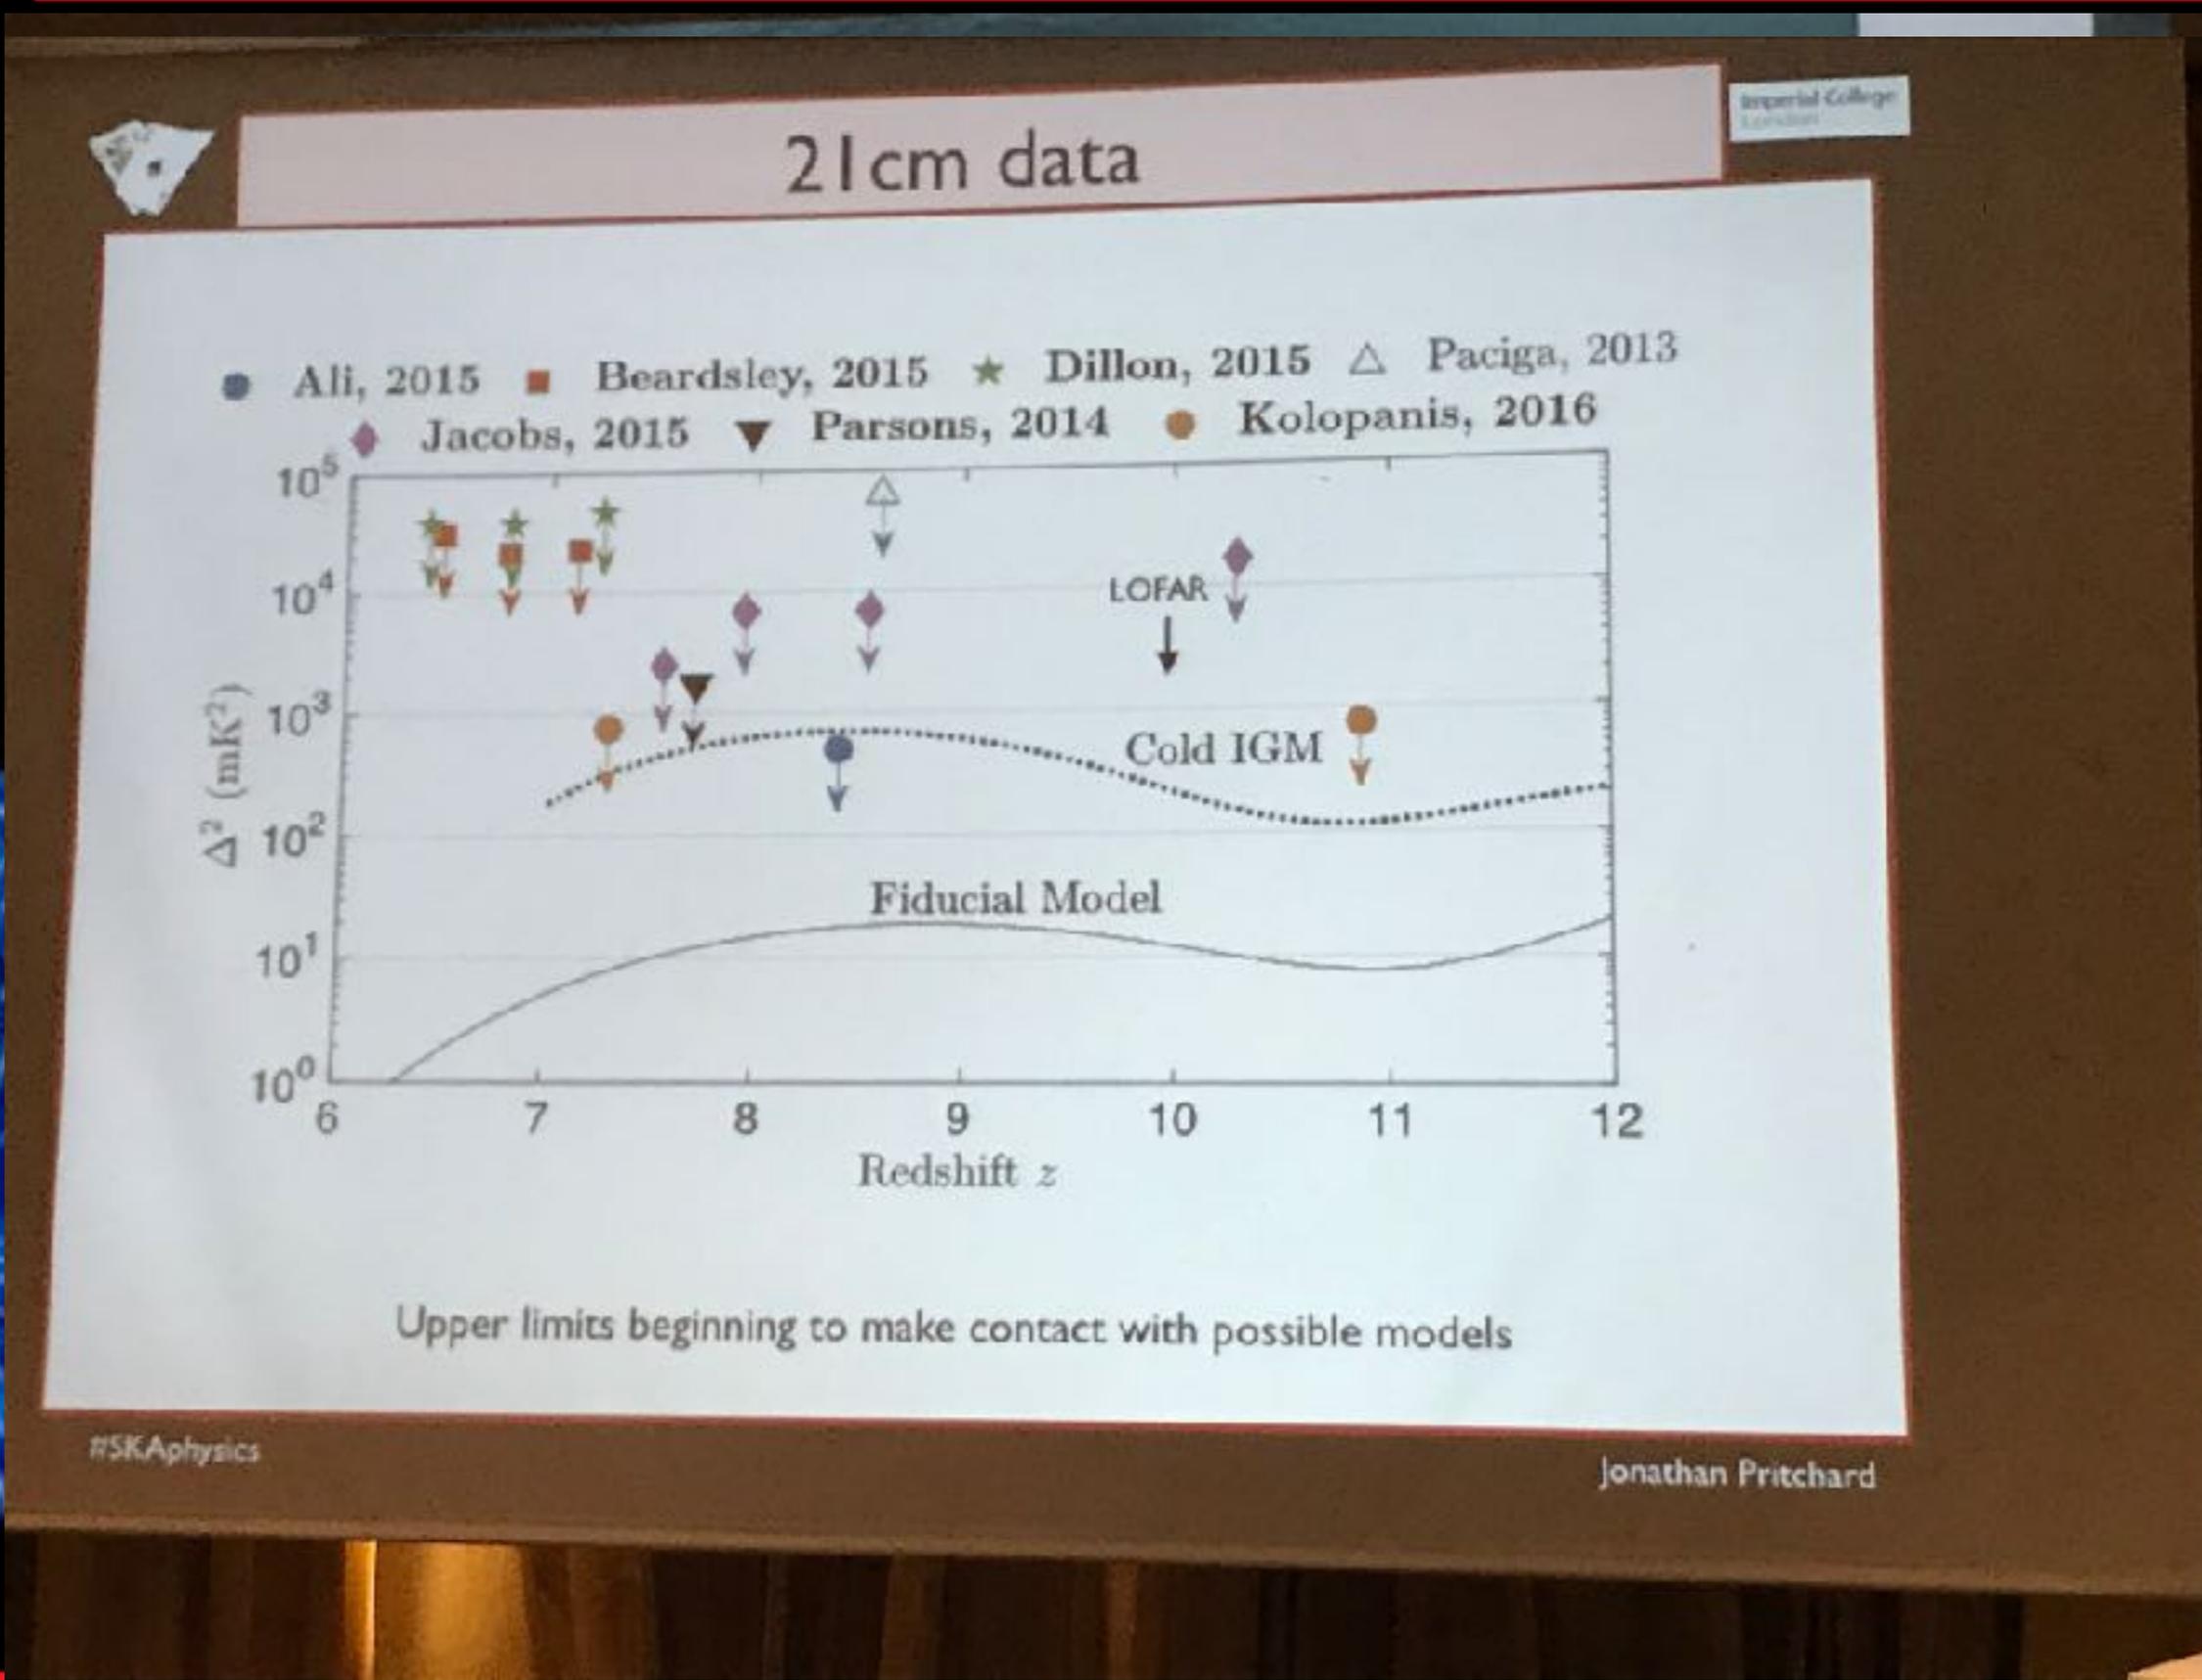

Harrison et al. (2016)

Camera et al. (2016)

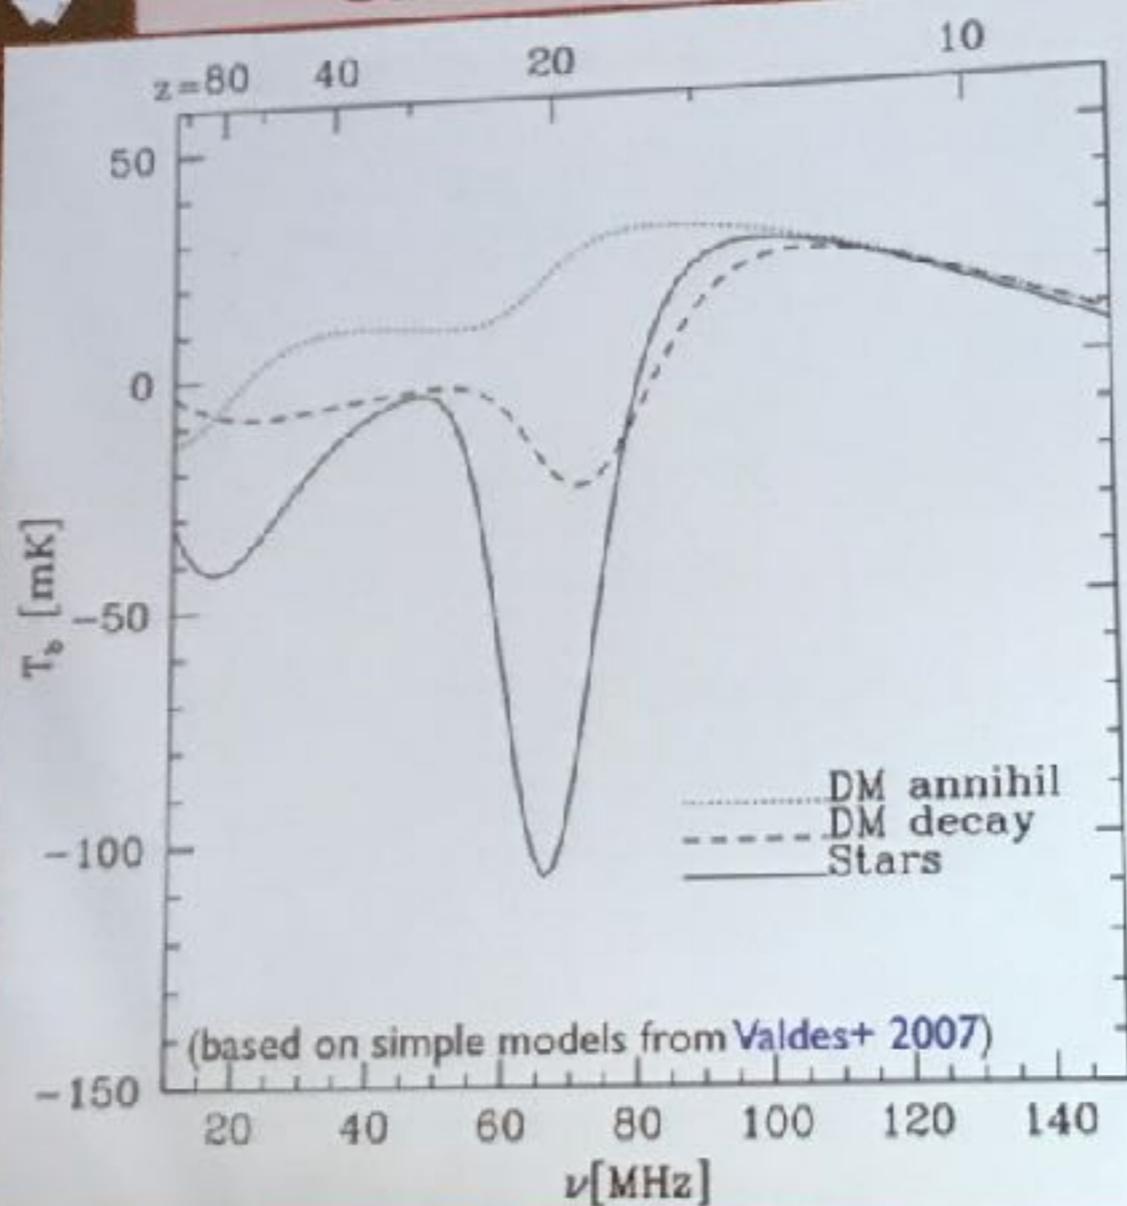

# Testing predictions

# Testing predictions

## Calorimetry and exotic physics

Dark matter decaying after recombination might impact thermal history

Possibilities for exotic energy injection:

DM annihilation/decay  
Furlanetto+ 2006  
Valdes+ 2007

Excited DM relaxation  
Finkbeiner+ 2008

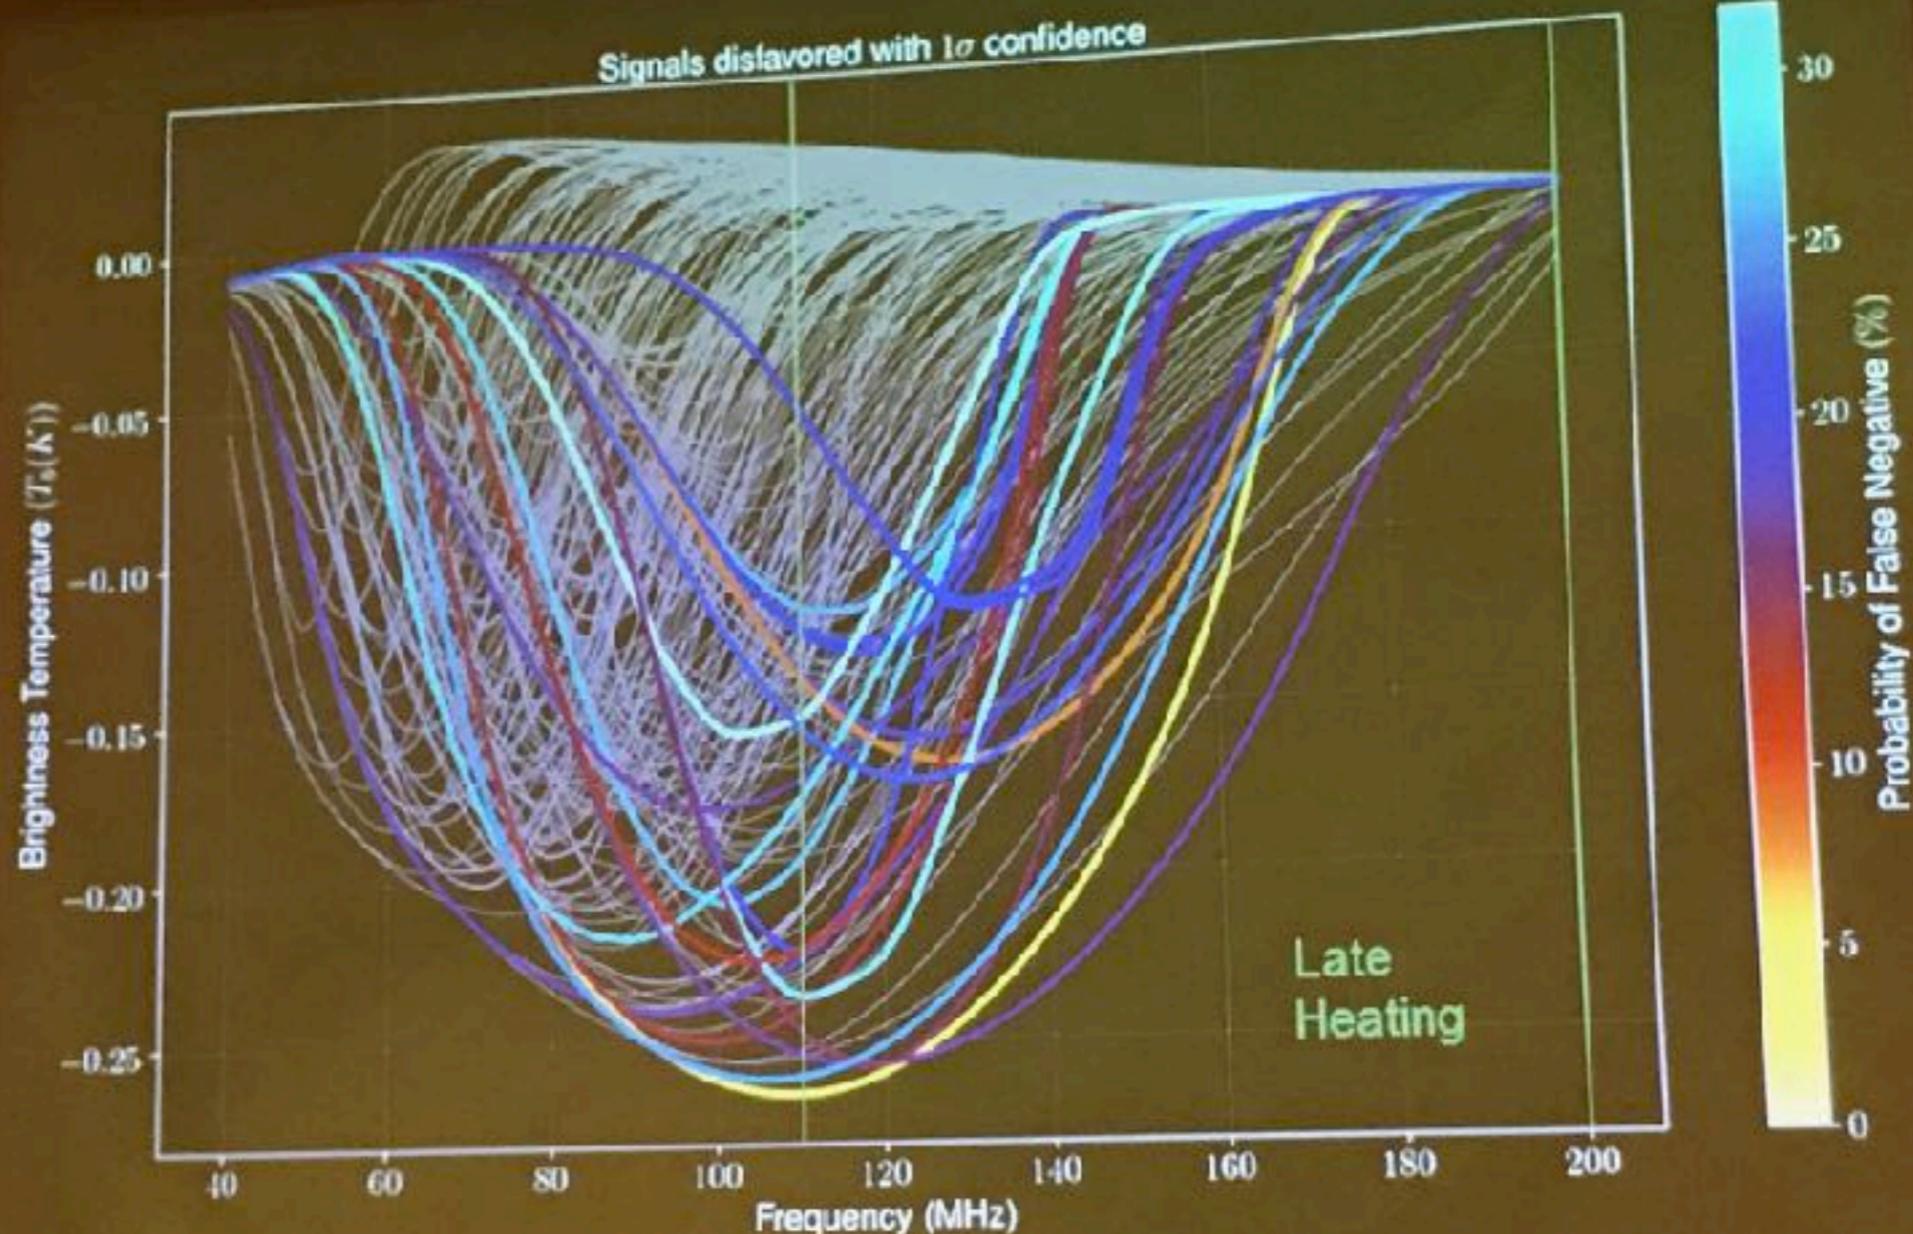

Evaporating primordial BH  
Mack+ 2008

Cosmic string wakes  
Brandenburger+ 2010

primordial magnetic fields  
Shiraishi & Tashiro

...

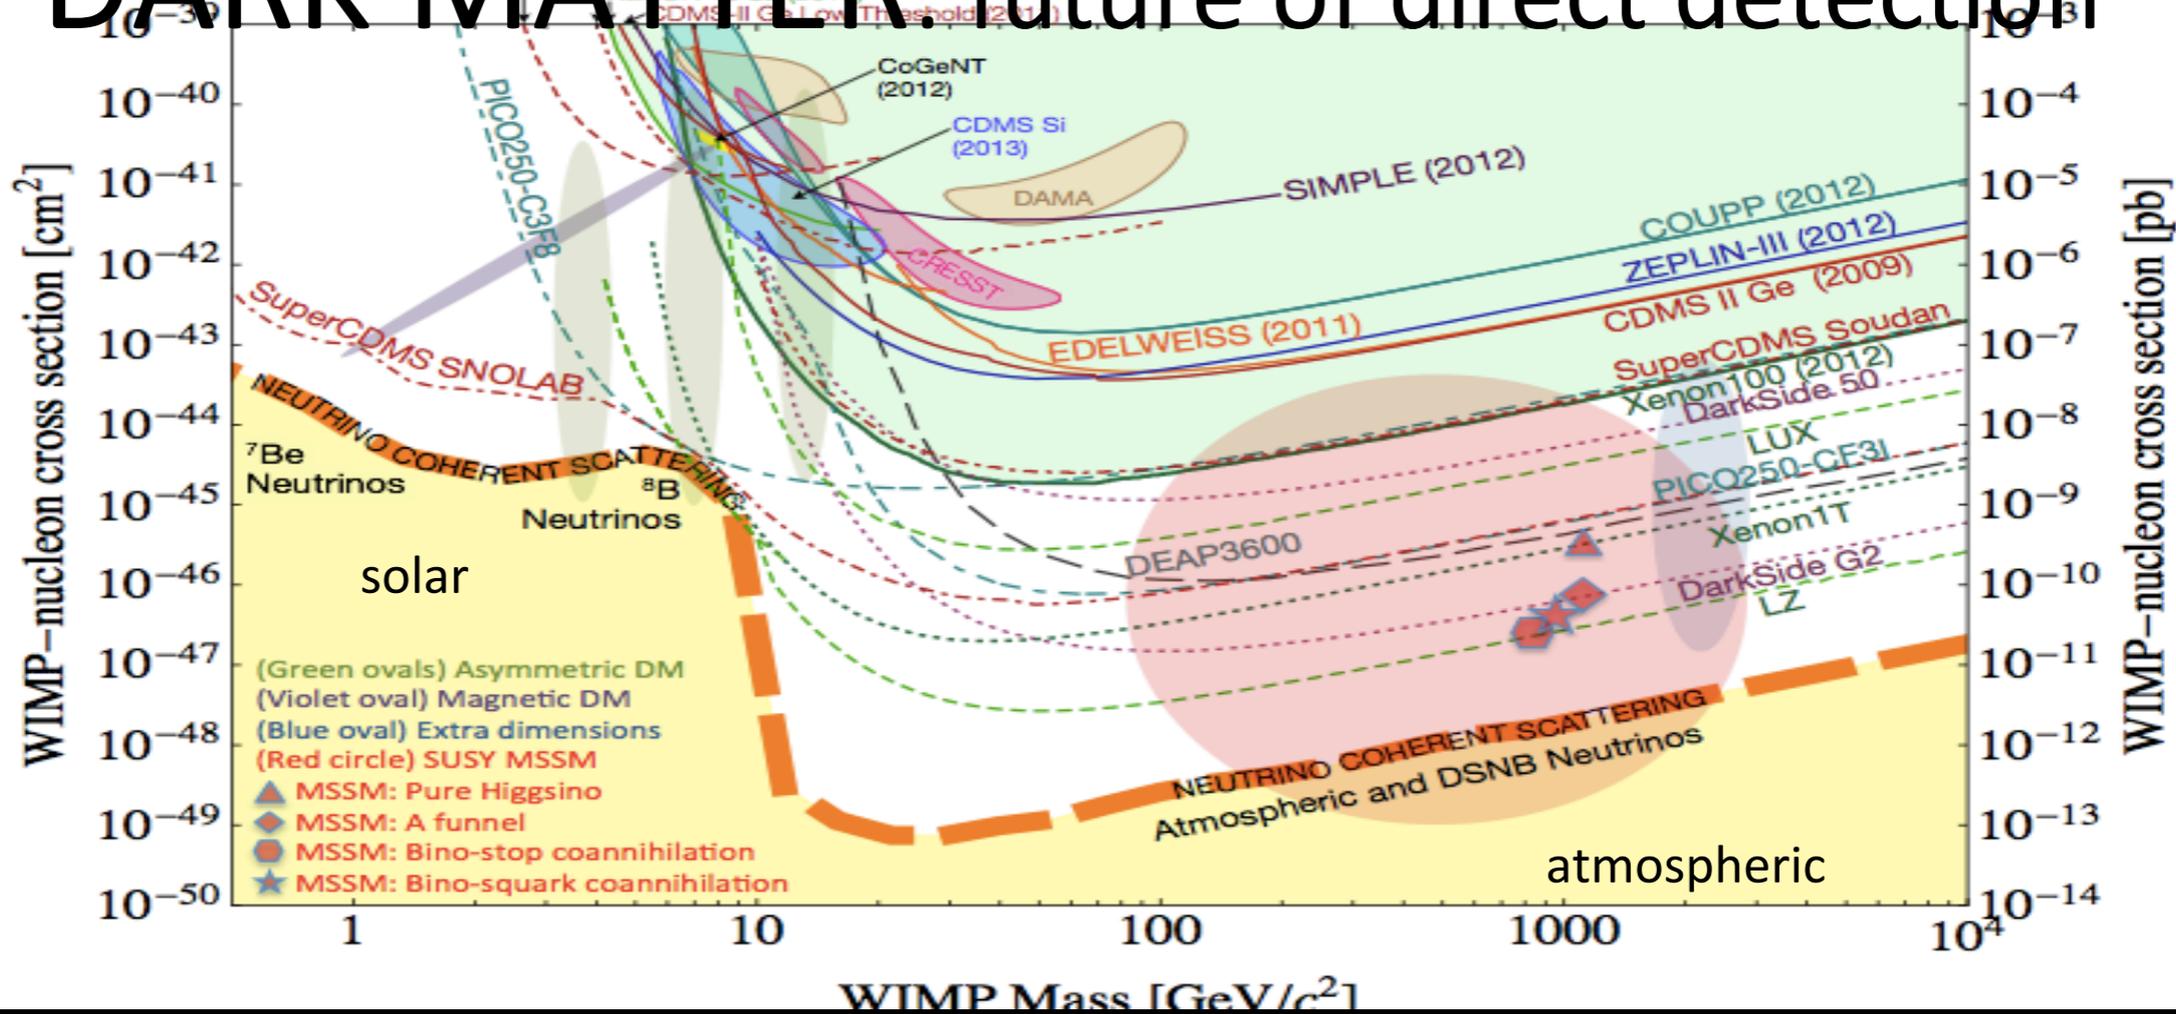

# Some parameters required!

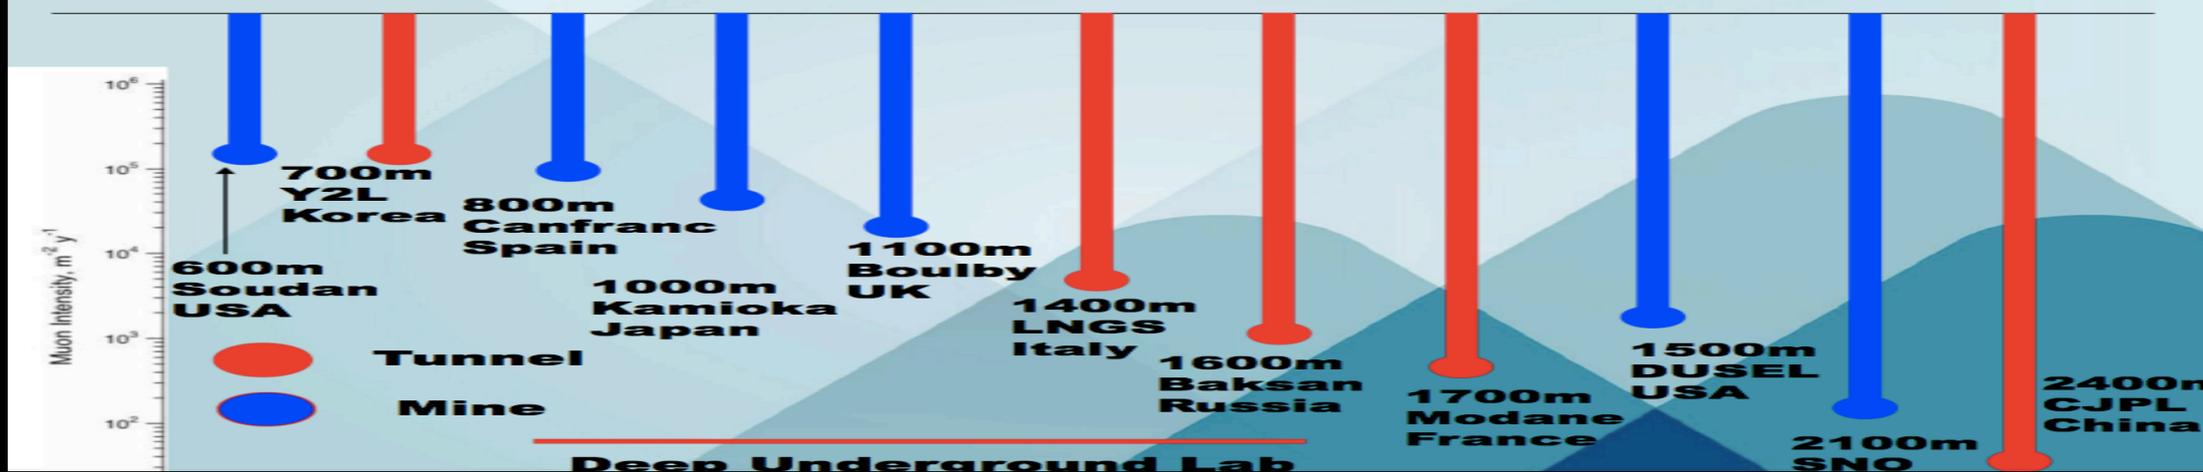

Singh, Subrahmanyam, Shankar, Rao, Fialkov, Cohen, RB, Girish, Raghunathan, Somashekar, Srivani 2017

**SARAS 2 (RRI, India)**

## DARK MATTER: future of direct detection

## UL in the world (rock overburden)

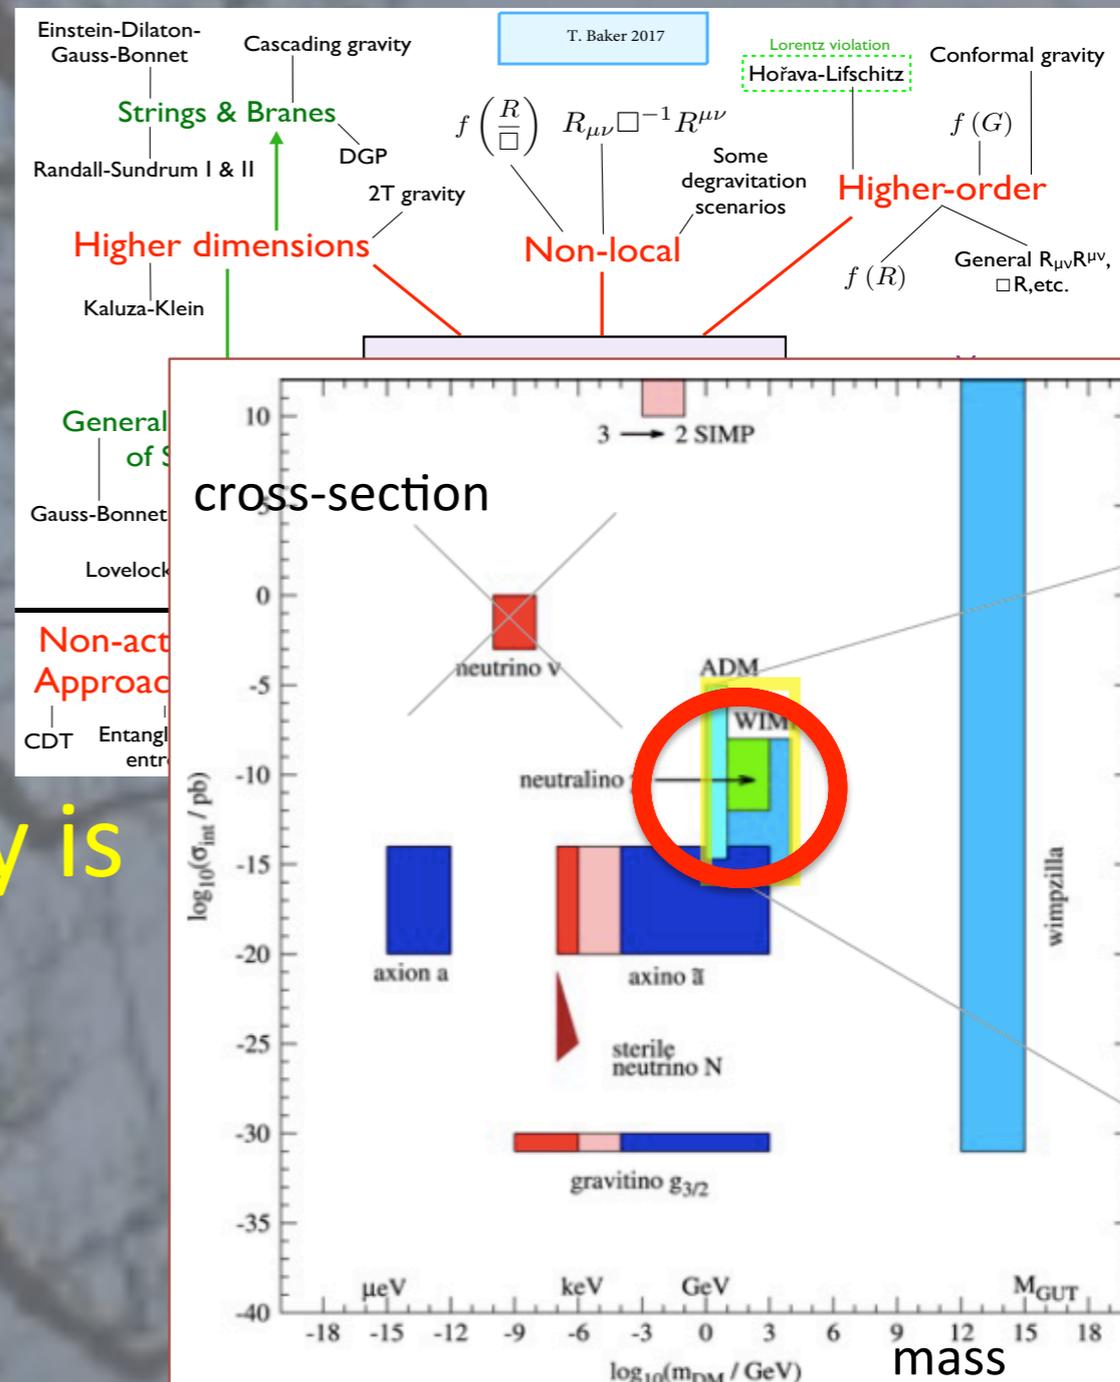

# DARK MATTER

What if we don't find dark matter in the next decade(s)?

So far, modifying gravity is ugly and doesn't work!

Look elsewhere!

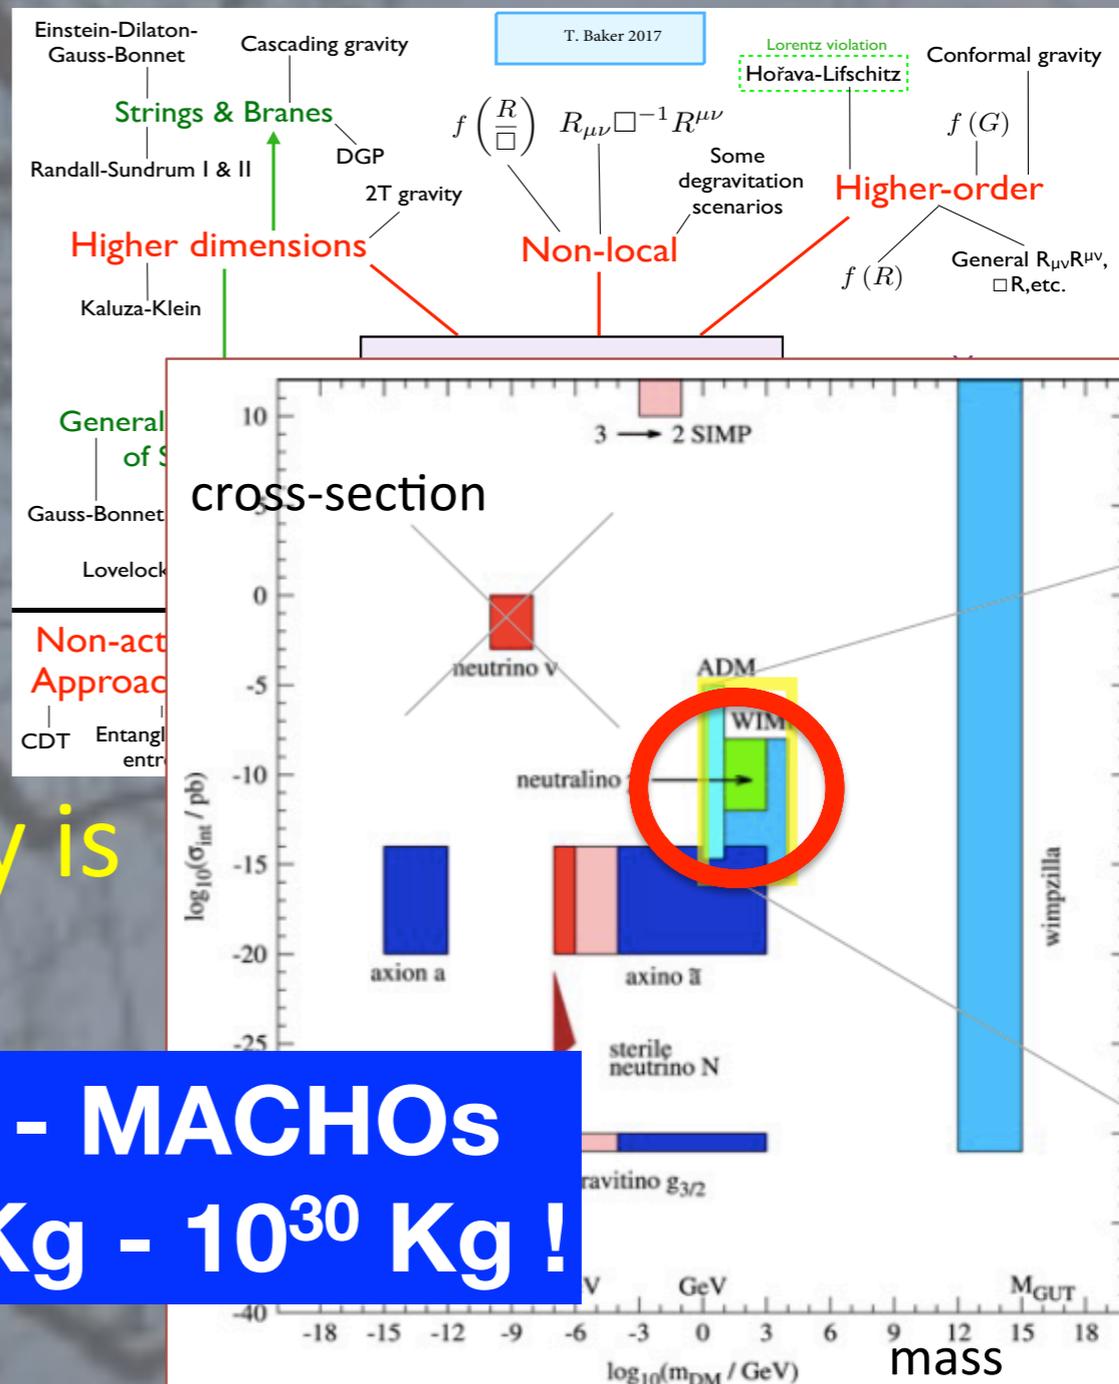

# DARK MATTER

What if we don't find dark matter in the next decade(s)?

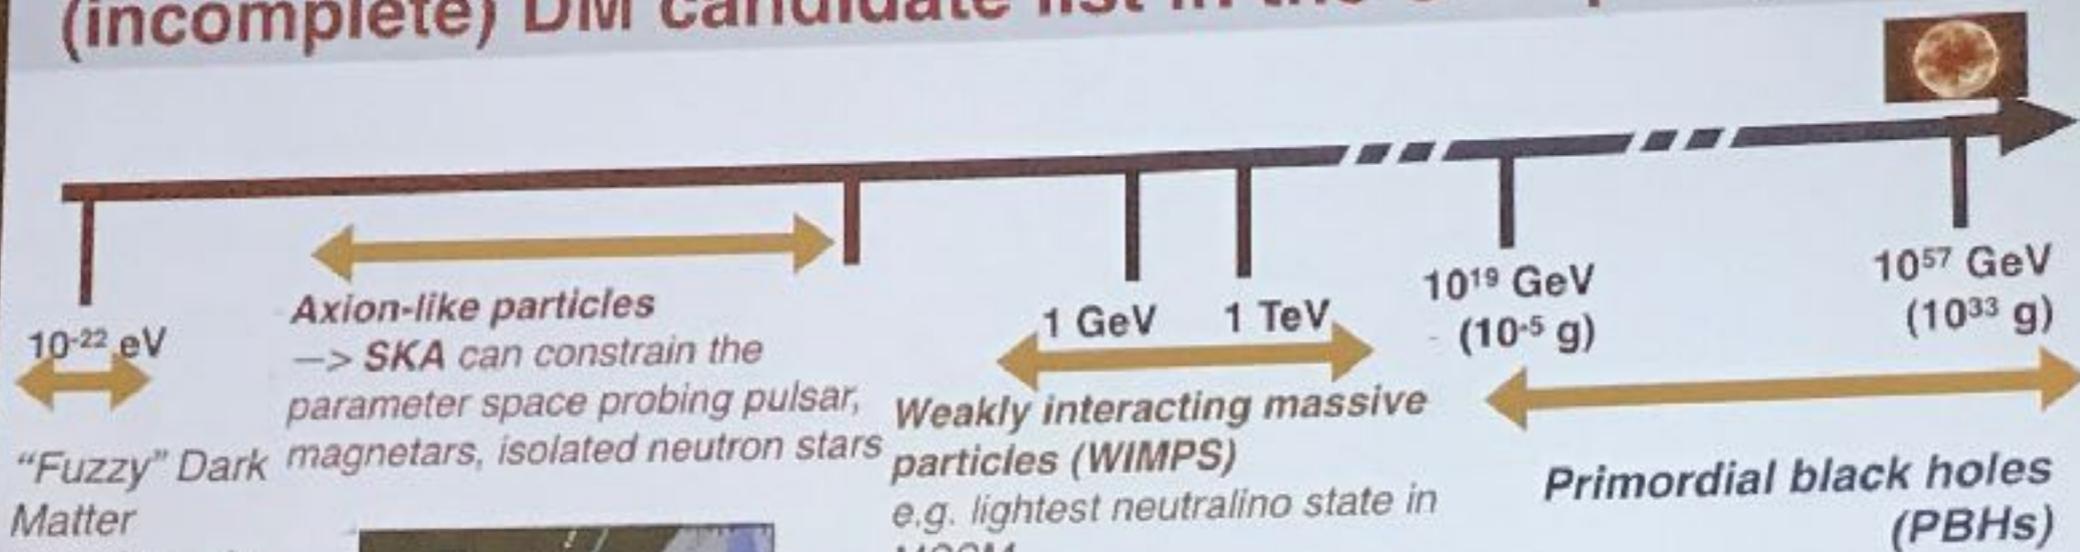

So far, modifying gravity is ugly and doesn't work!

Look elsewhere!

**ALP - MACHOs**  
 **$10^{-55}$  Kg -  $10^{30}$  Kg !**

## (incomplete) DM candidate list in the SKA perspective

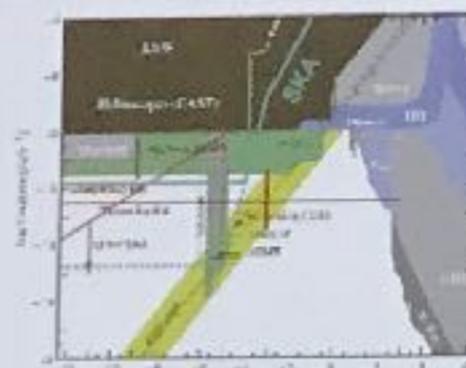

**"Fuzzy" Dark Matter**  
 $\lambda_{dB} \sim 1 \text{ kpc} \sim \text{size dSph Galaxy}$   
 [Hui, Ostriker, Tremaine, Witten 2016]

**Axion-like particles**  
 → SKA can constrain the parameter space probing pulsar, magnetars, isolated neutron stars

**Weakly interacting massive particles (WIMPs)**  
 e.g. lightest neutralino state in MSSM

**Primordial black holes (PBHs)**  
 [Zeld'ovich and Novikov 1966, Hawking 1971]

→ SKA will provide strong constraints on radio emission from leptonic final states

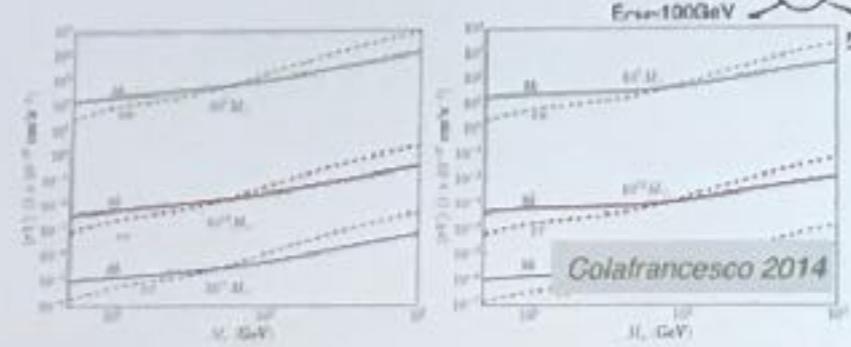

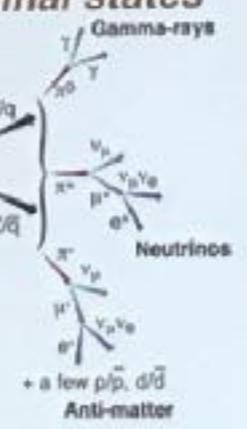

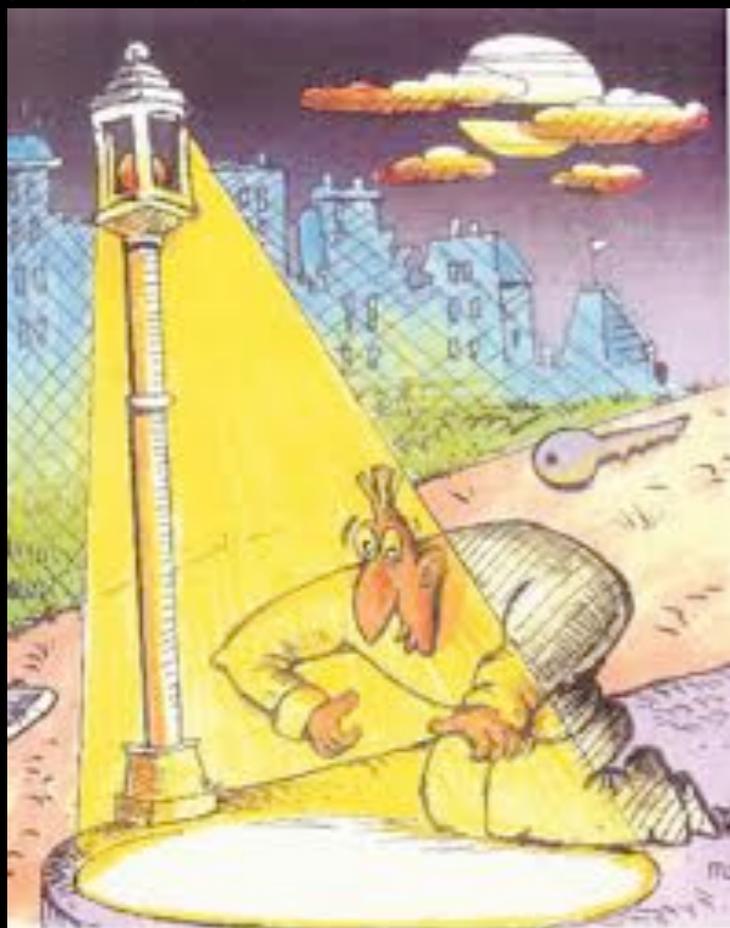

Figure 5: The  $\langle\sigma v\rangle$  upper limits from 30 hour of SKA integration time for  $z = 0.01$  at 300 MHz (top) and 1 GHz (bottom) as the neutralino mass  $M_\chi$  is varied with annihilation channel  $b\bar{b}$  in solid lines and  $\tau\tau$  in dashed lines. A value  $\langle\sigma\rangle = 5 \mu\text{G}$  was adopted. Black lines correspond to halos with mass  $10^{11} M_\odot$ , red lines to  $10^{12} M_\odot$ , and green lines to  $10^7 M_\odot$  (from Colafrancesco et al. 2014).

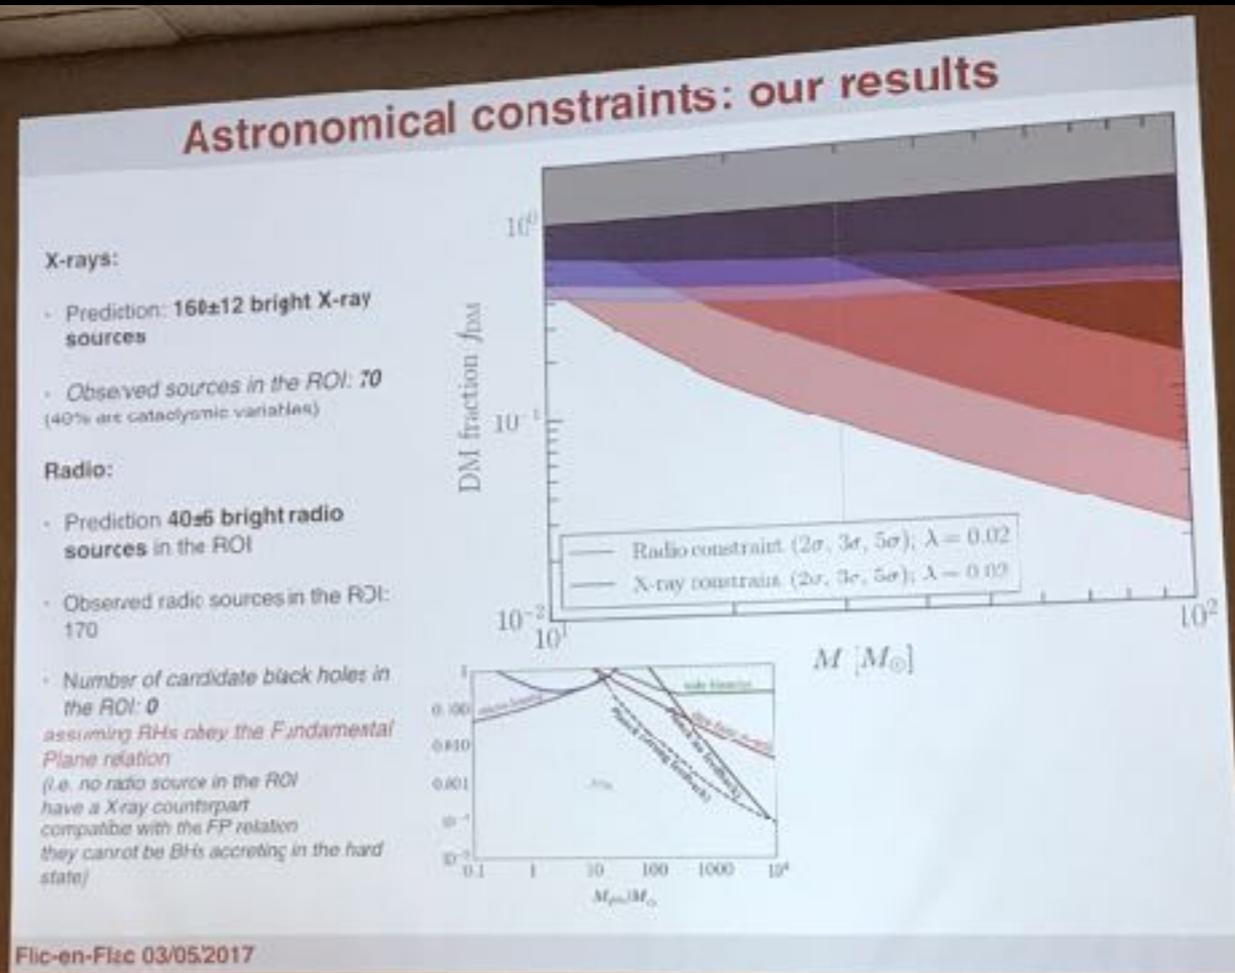

many constraints from lensing, wide binaries, Galactic disk stability; became less popular after MACHO project [Alcock 2001]

→ SKA can provide strong constraints on the presence of a population of heavy PBHs (GHz radio emission due to accretion of gas in the inner Galaxy)

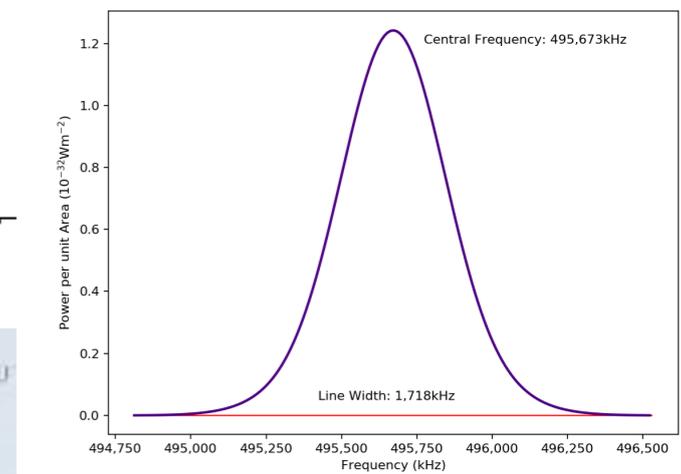

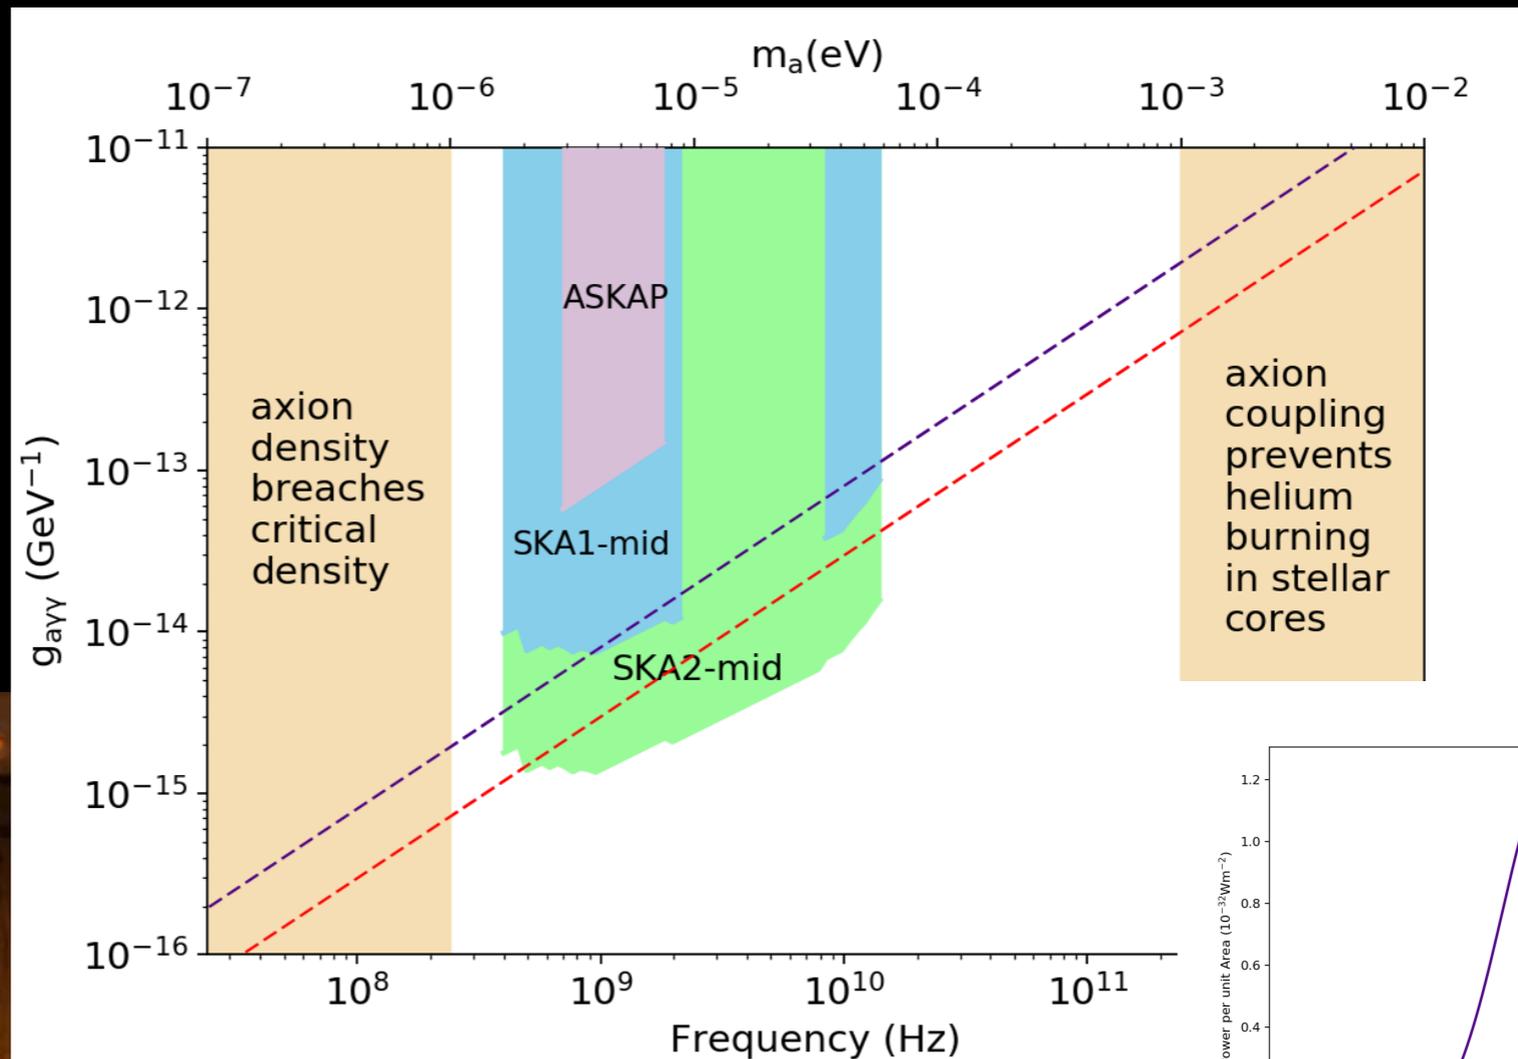

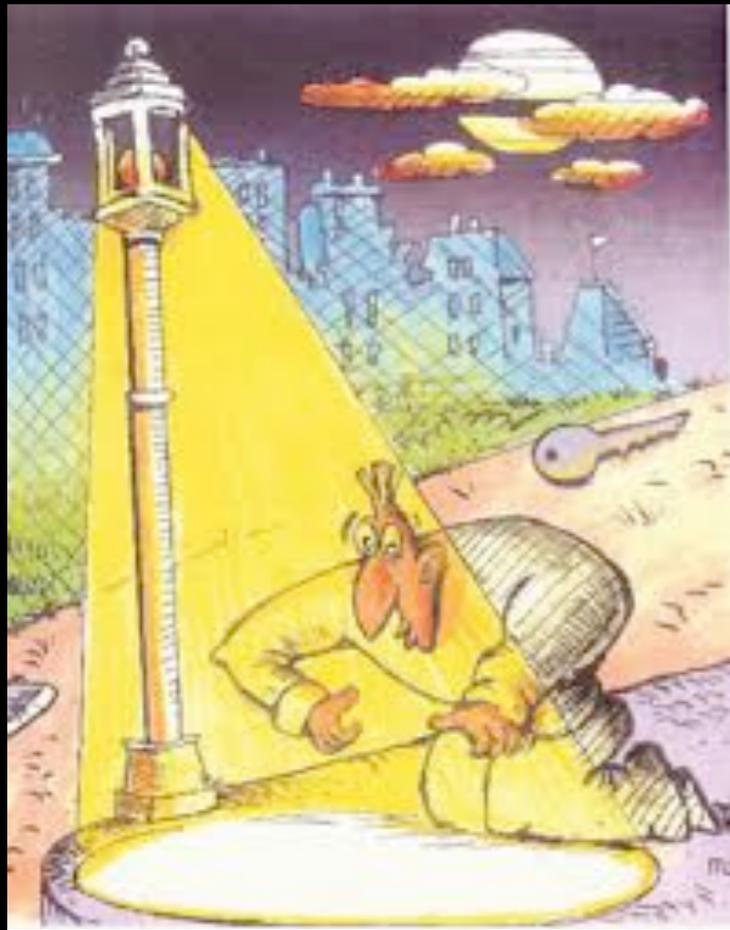

## PBHs return

# BIG Unknowns

## PBHs return

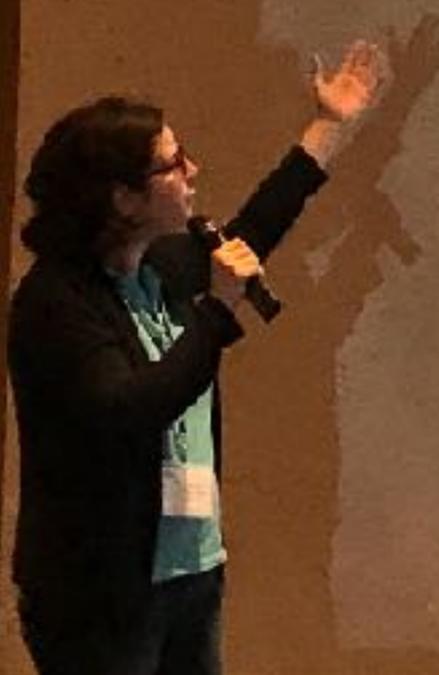

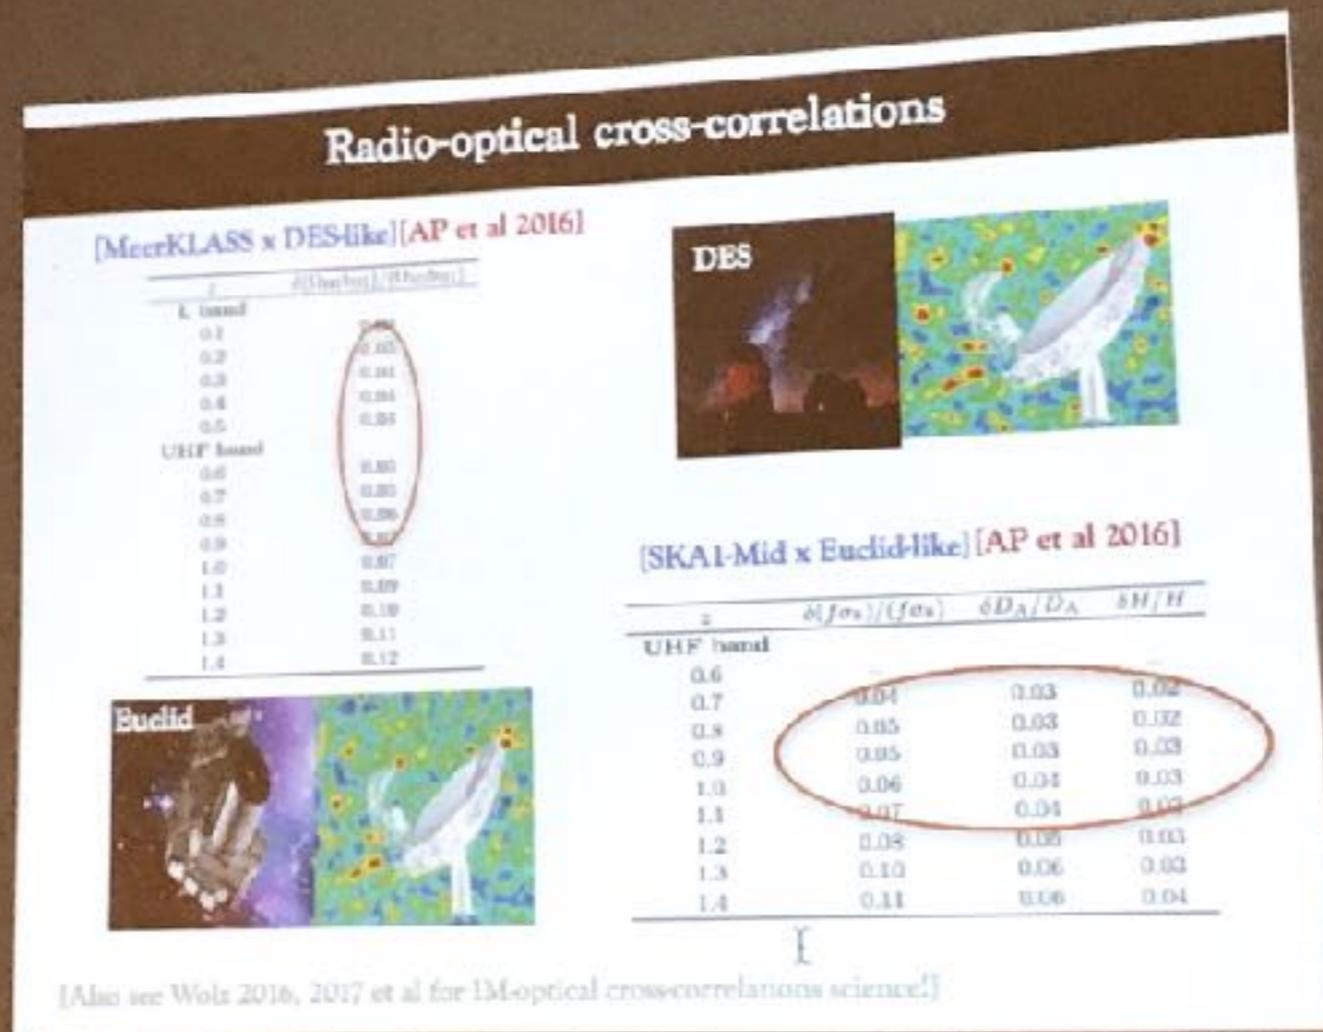

Observed sources in the ROI: 170 (40% are cataclysmic variables)

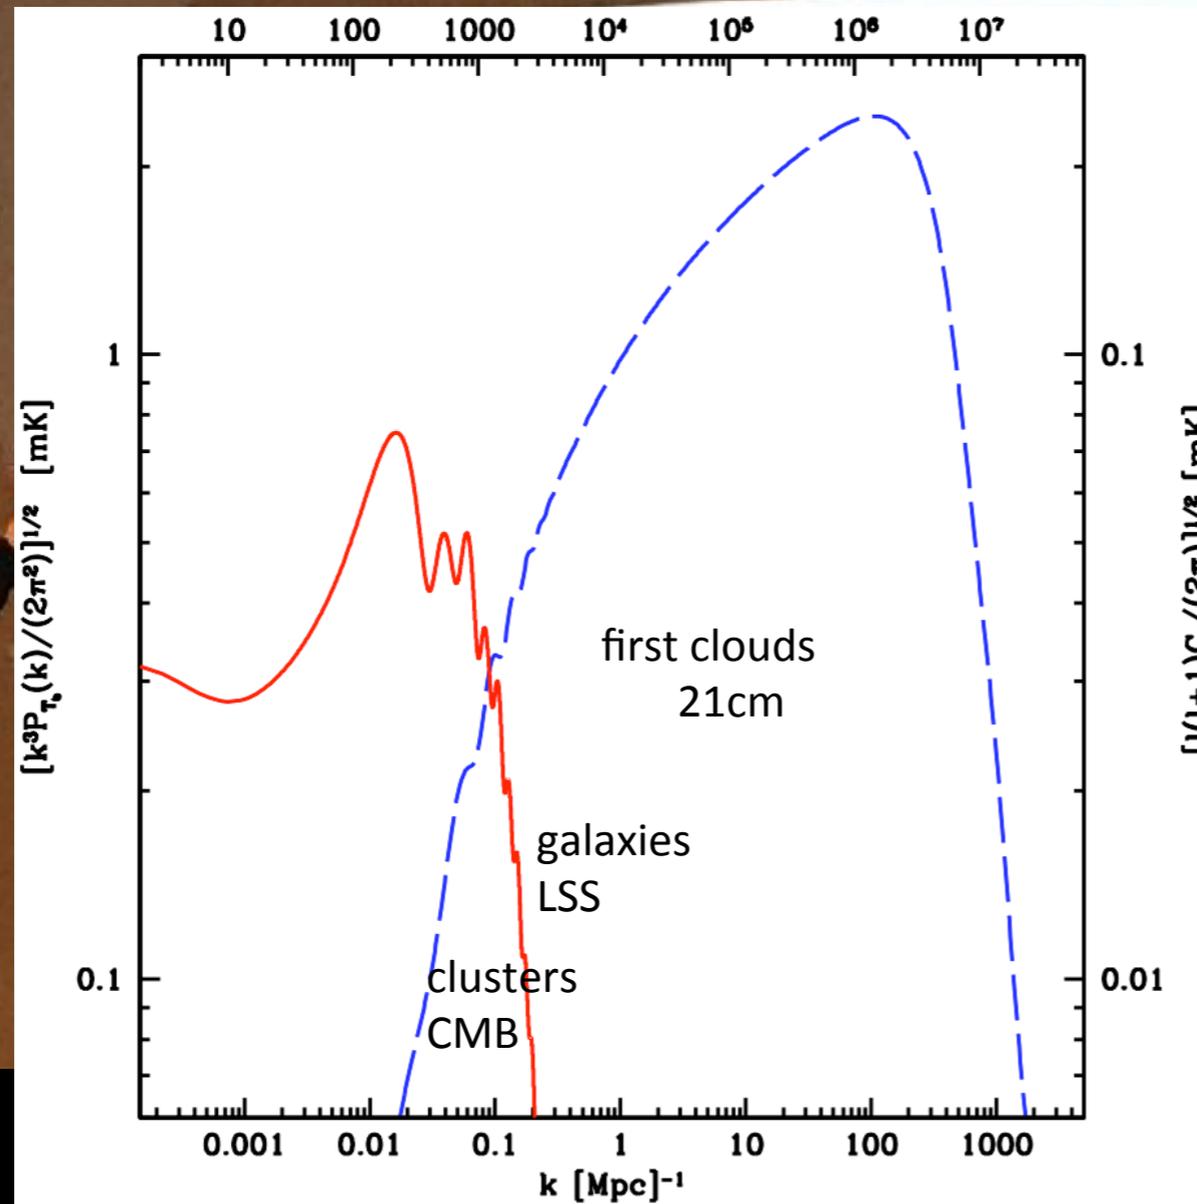

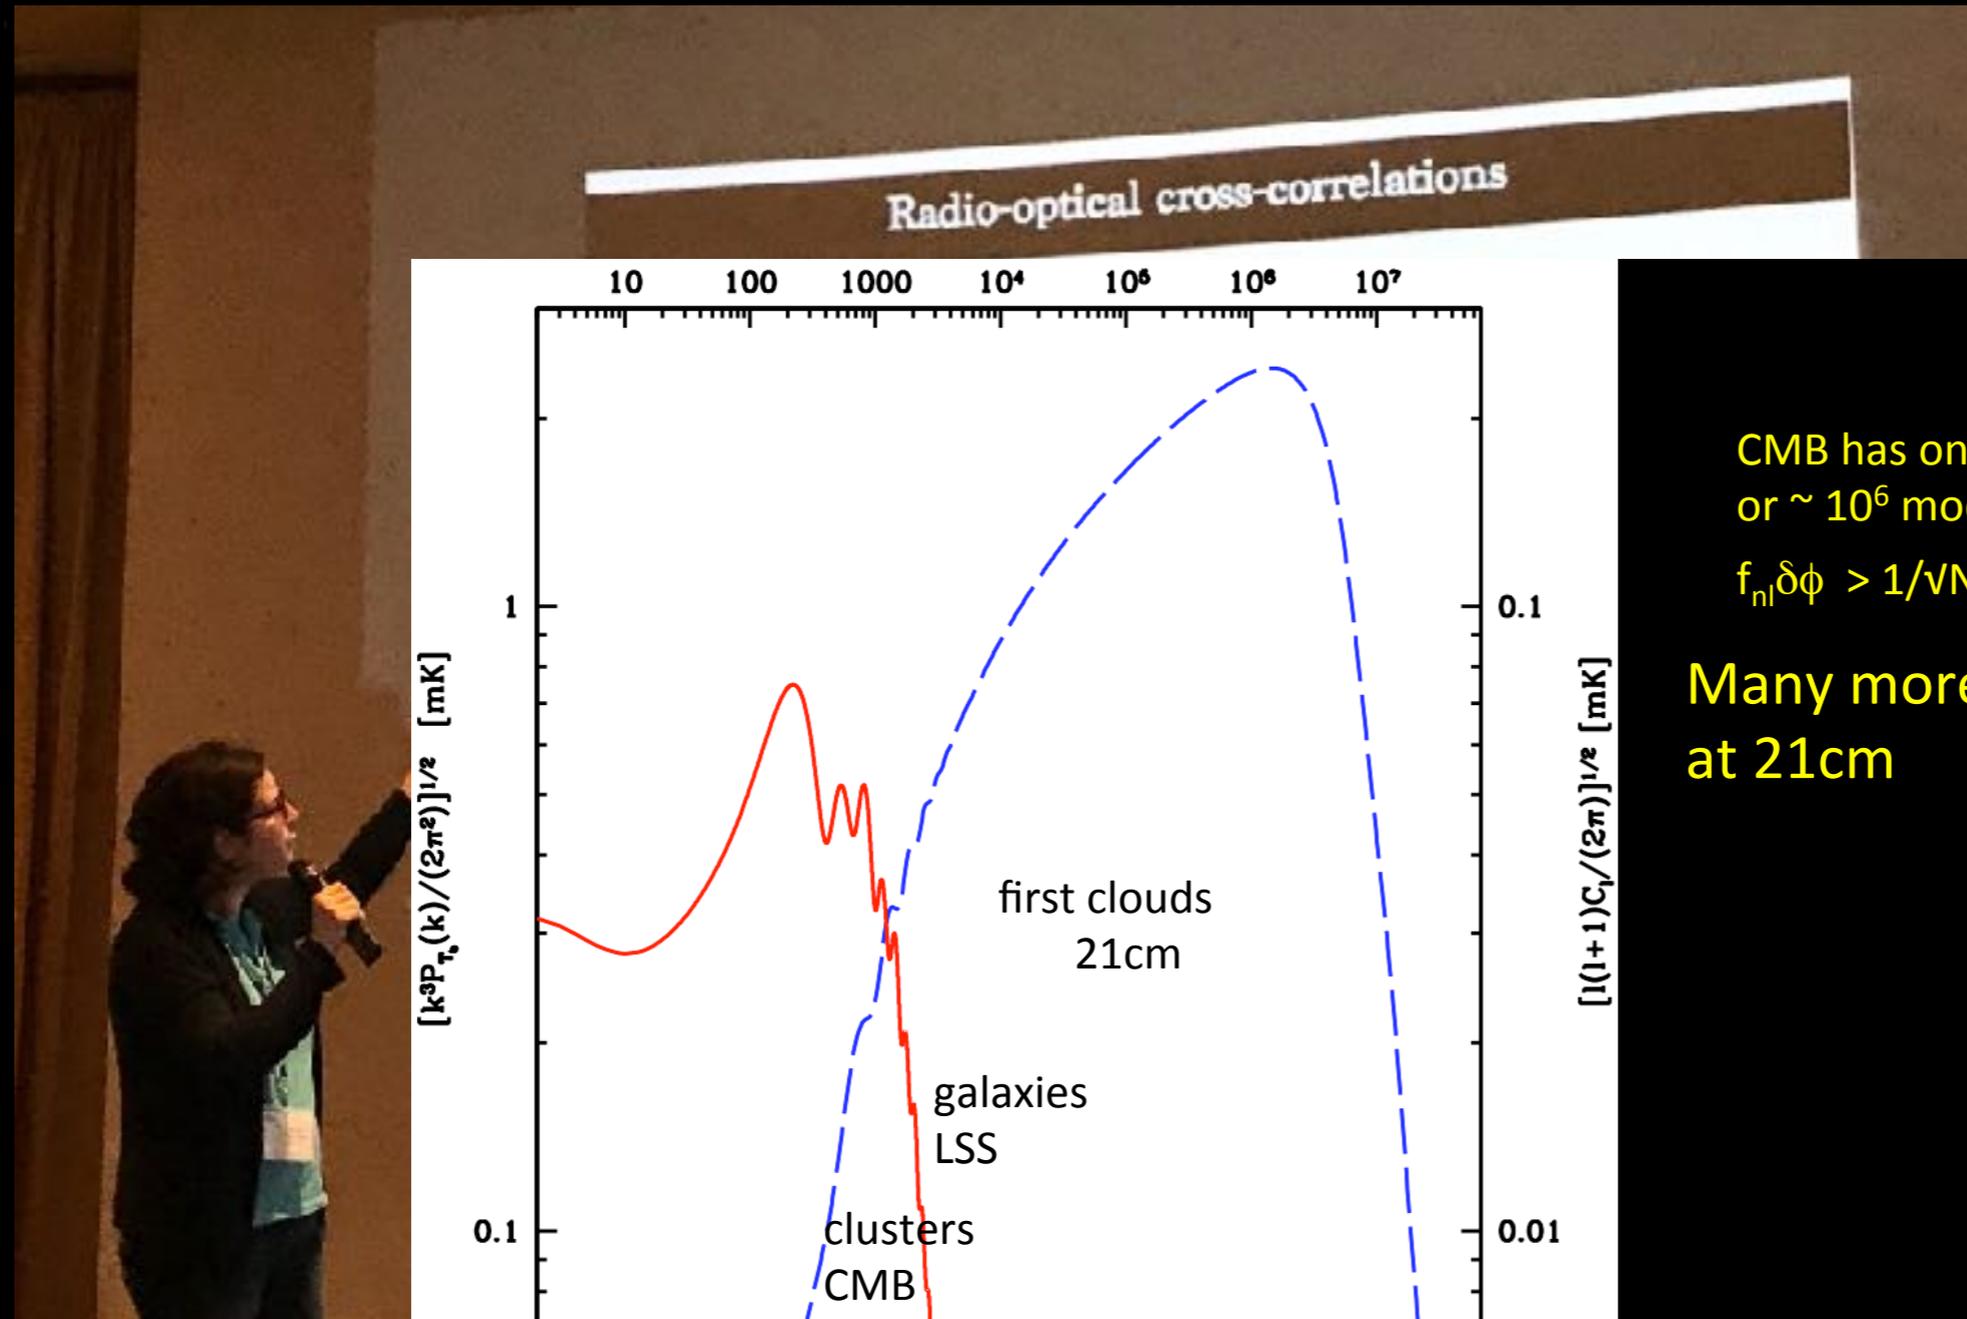

**Radio:**

- Prediction 40±6 bright radio sources in the ROI
- Observed radio sources in the ROI: 170
- Number of candidate black holes in the ROI: 0

*assuming BHs obey the Fundamental Plane relation (i.e. no radio source in the ROI have a X-ray counterpart compatible with the FP relation they cannot be BHs accreting in the hard state)*

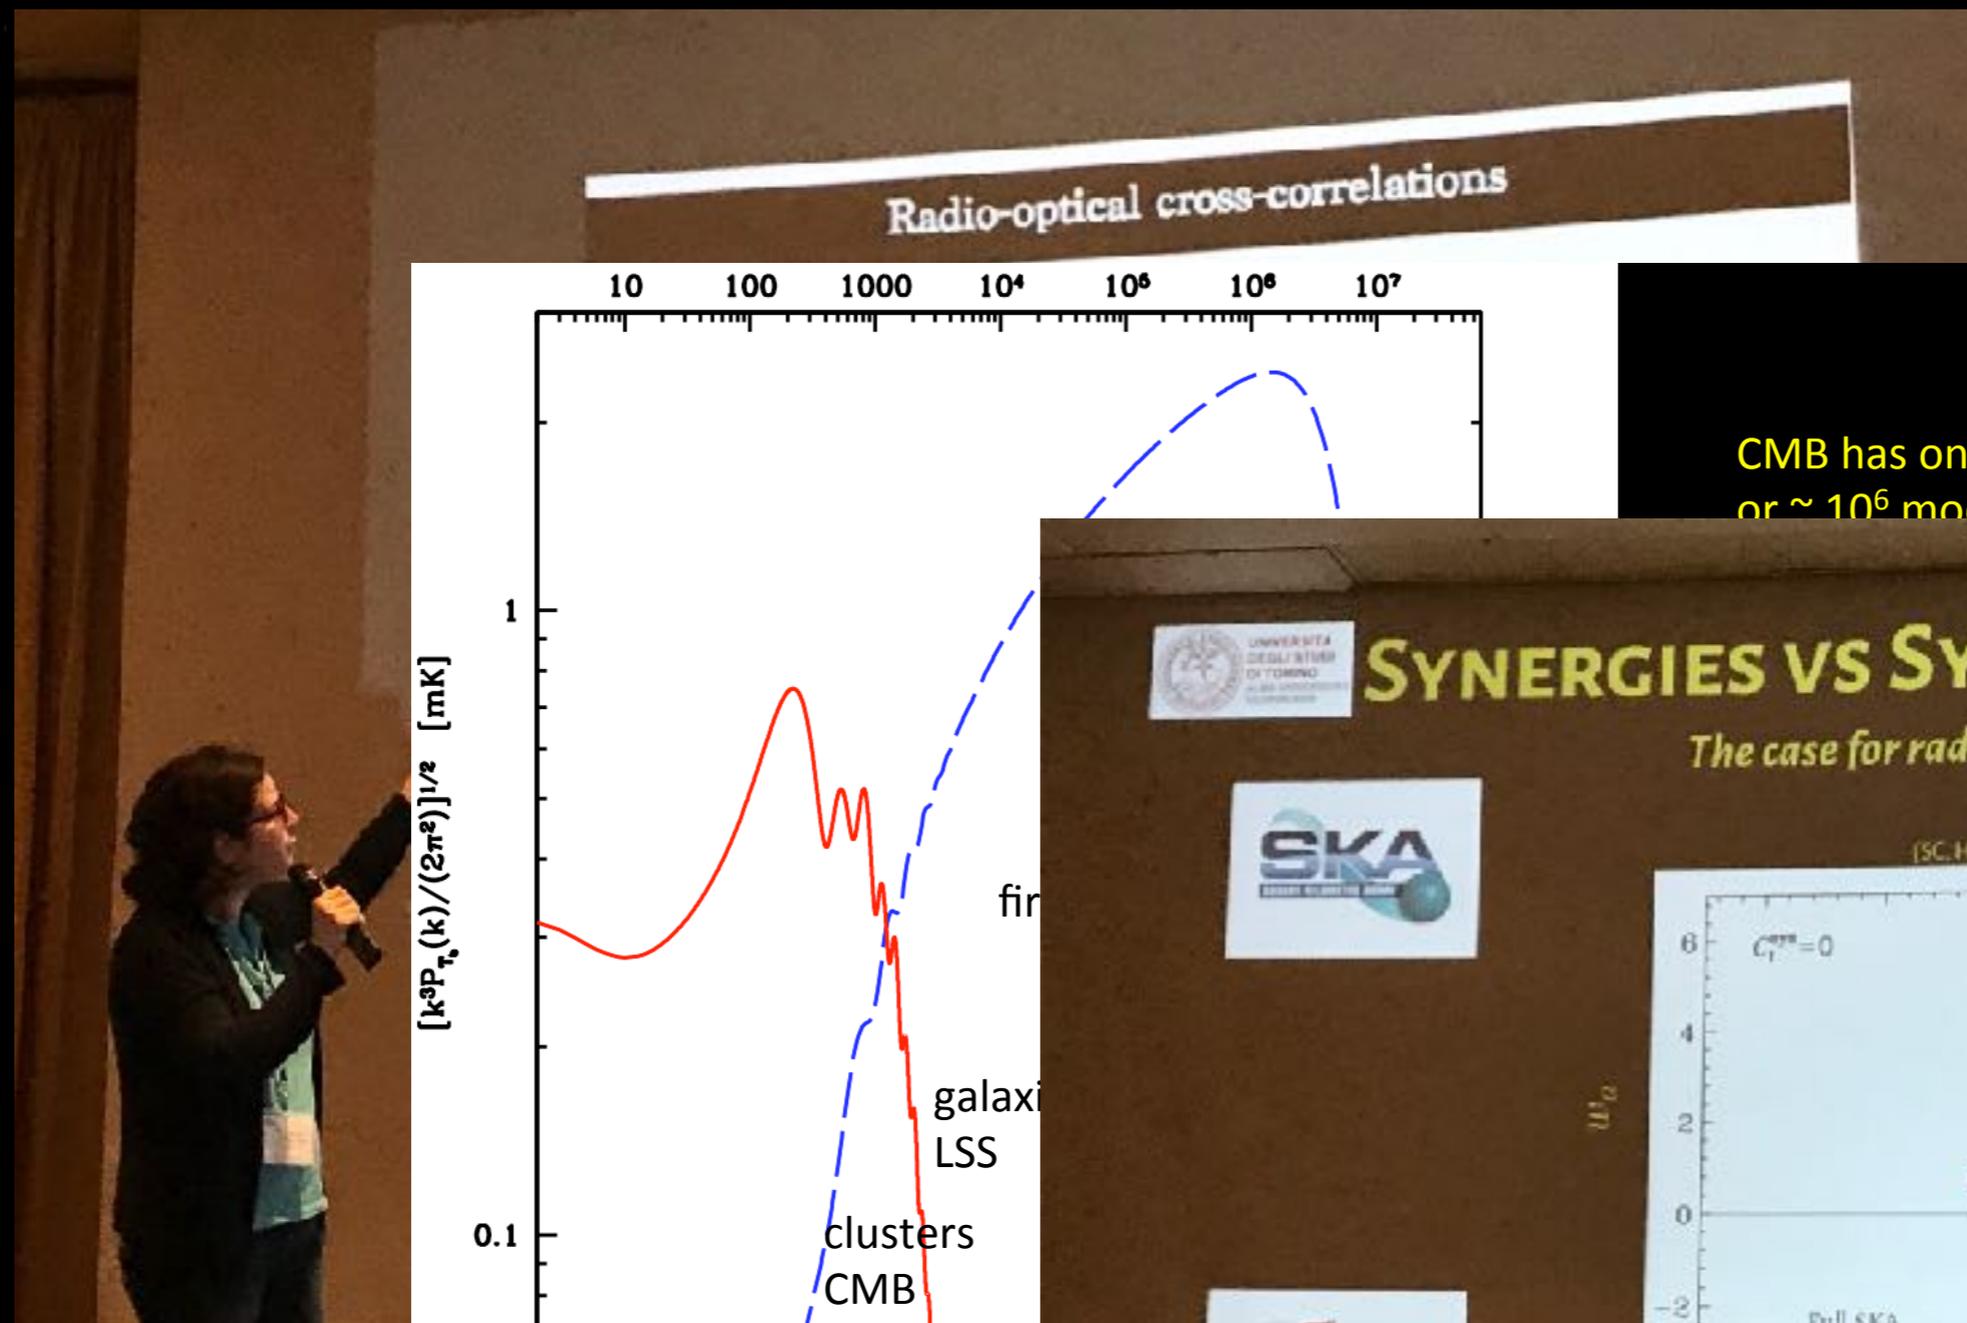

Flic-en-Flic 03/05/2017

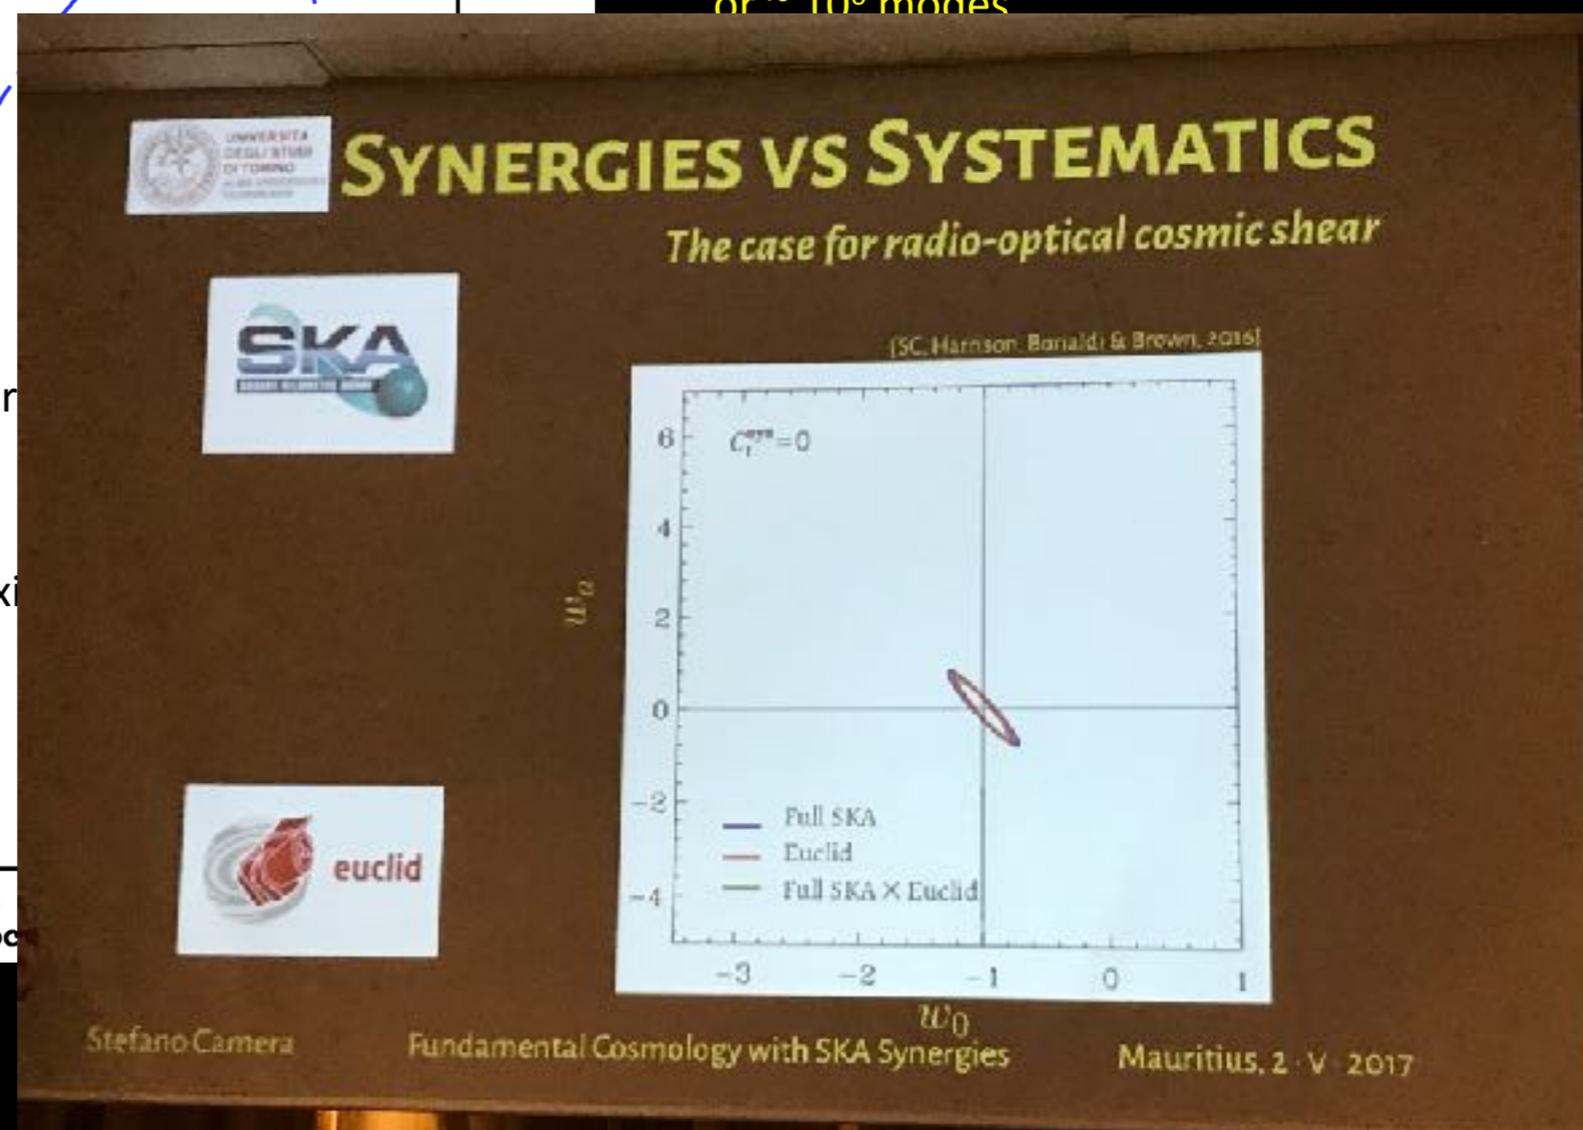

CMB has only  $\ell \sim 10^3$   
 or  $\sim 10^6$  modes  
 $f_{nl}\delta\phi > 1/\sqrt{N} \sim 10^{-3}$

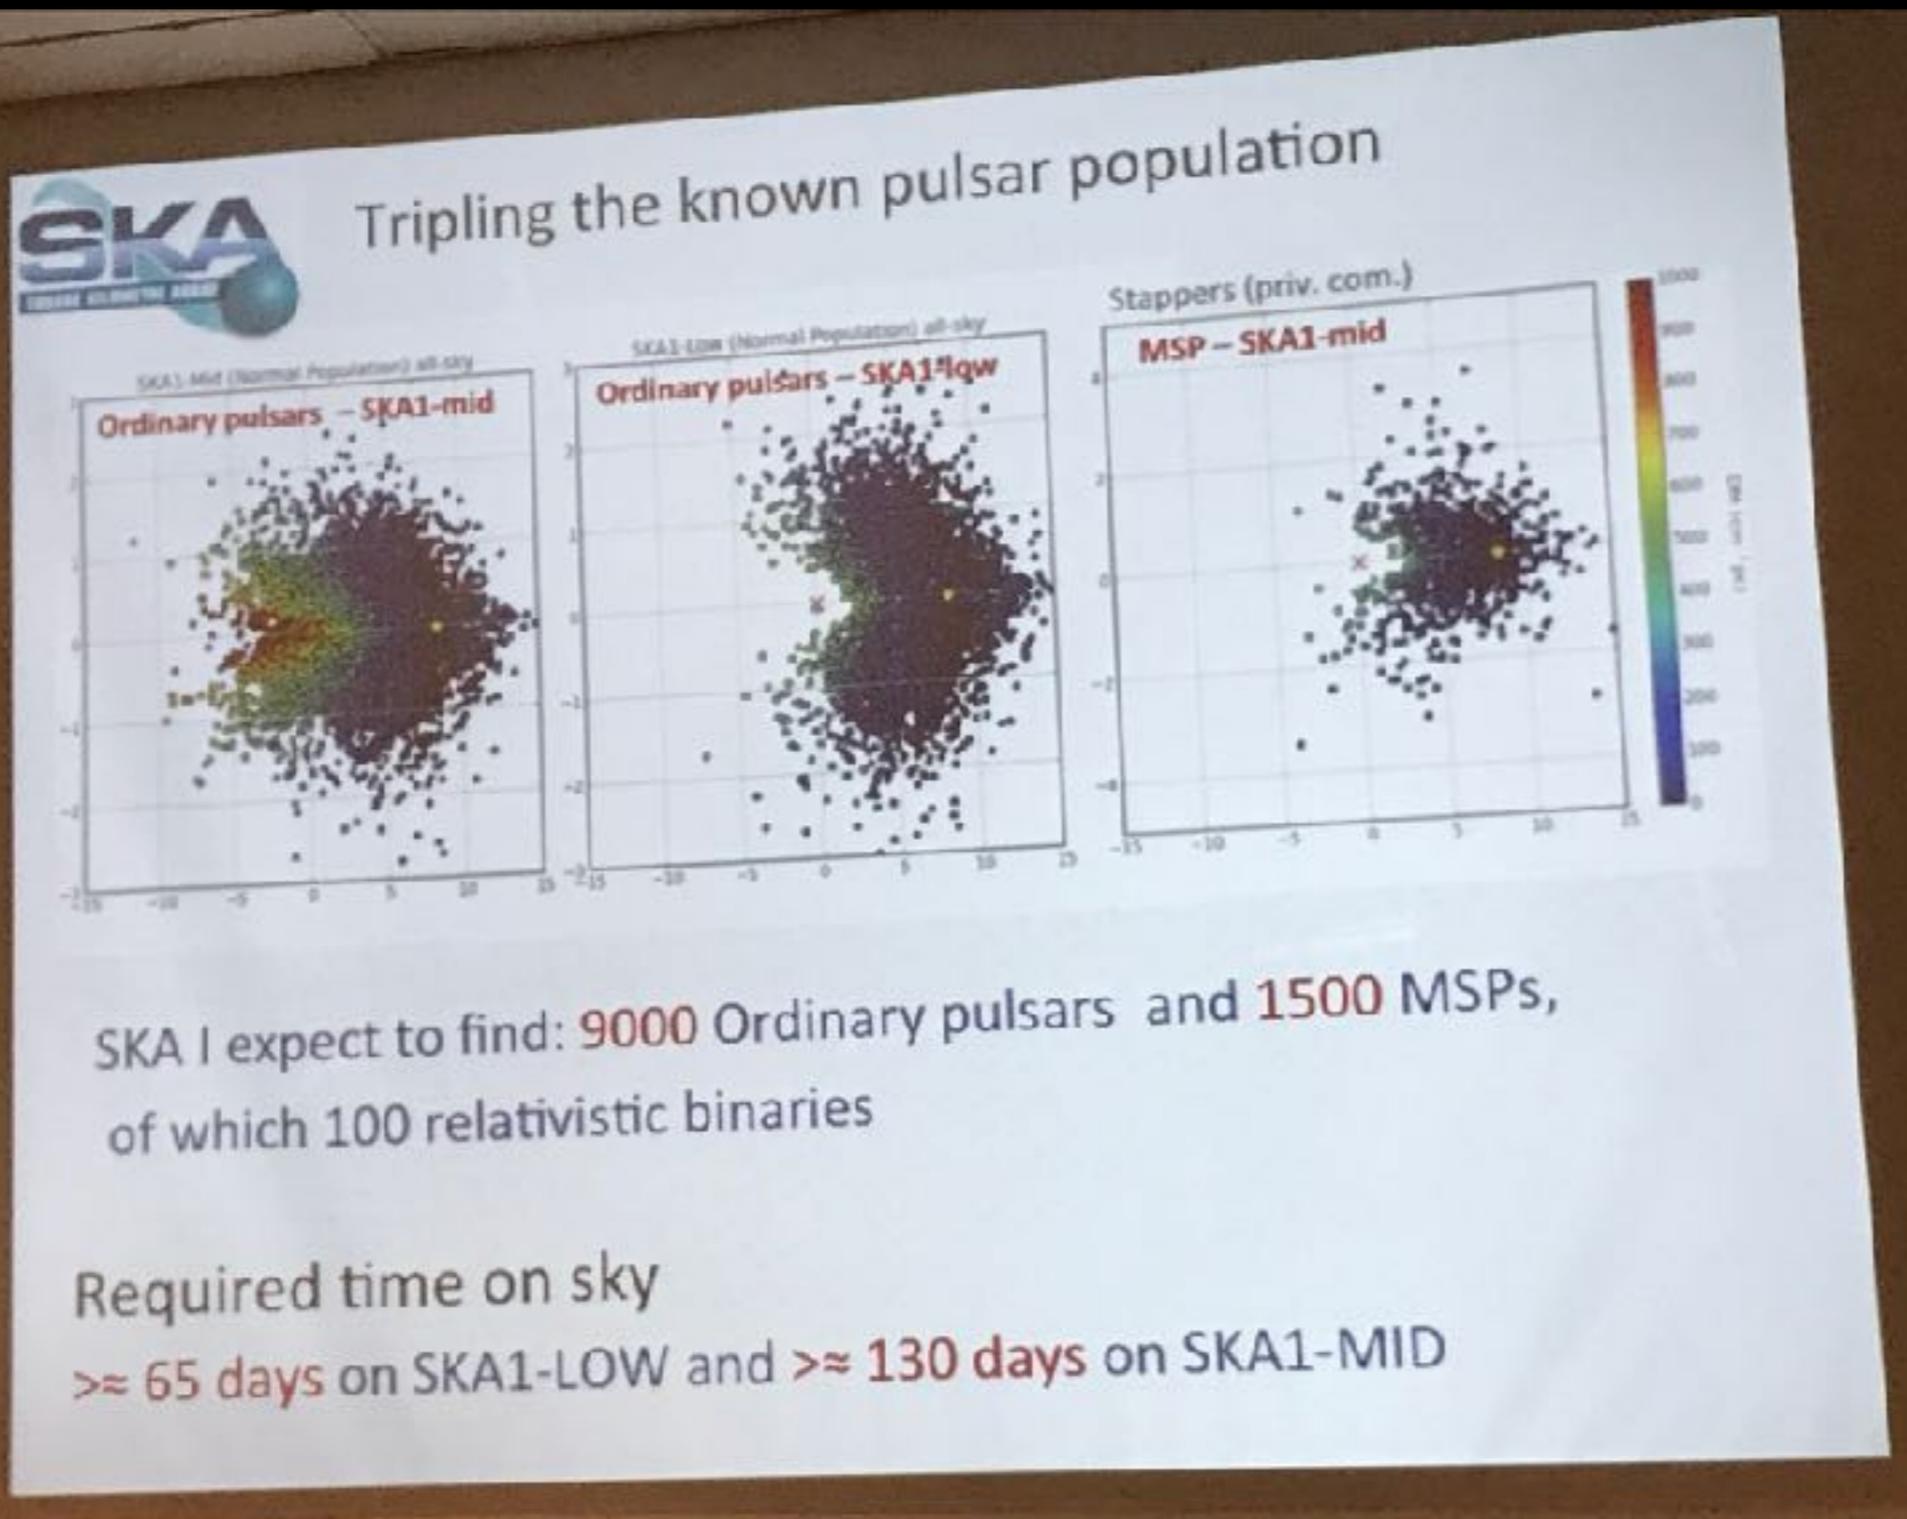

Many more modes  
 at 21cm

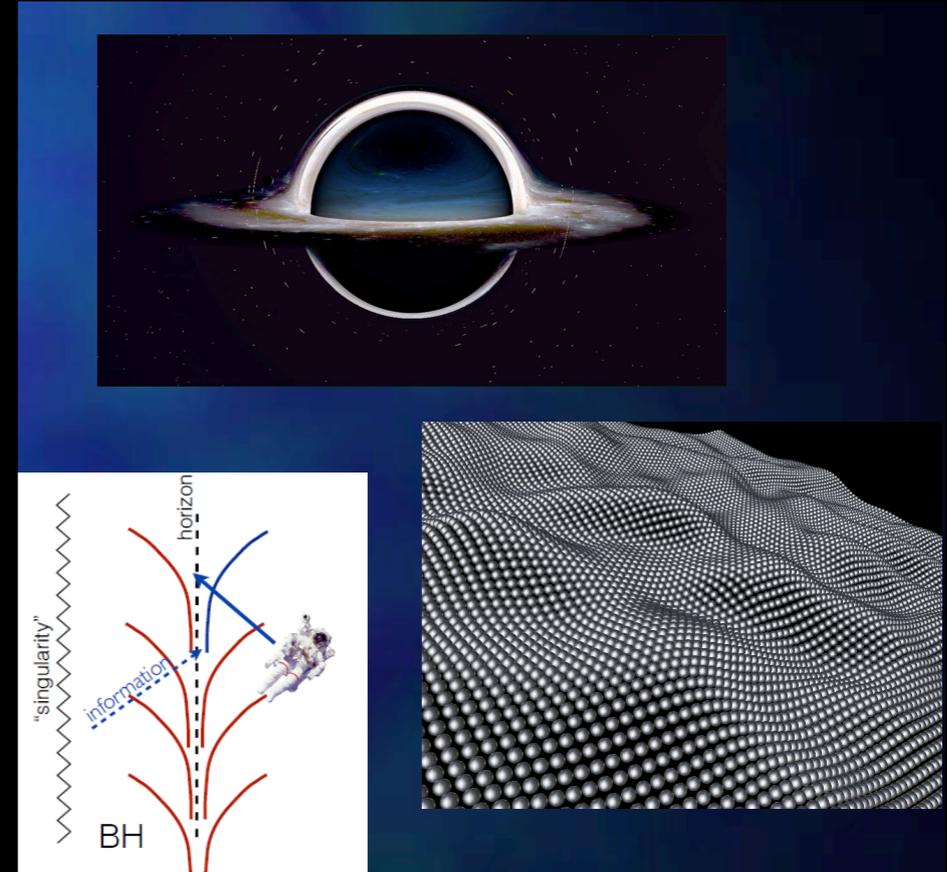

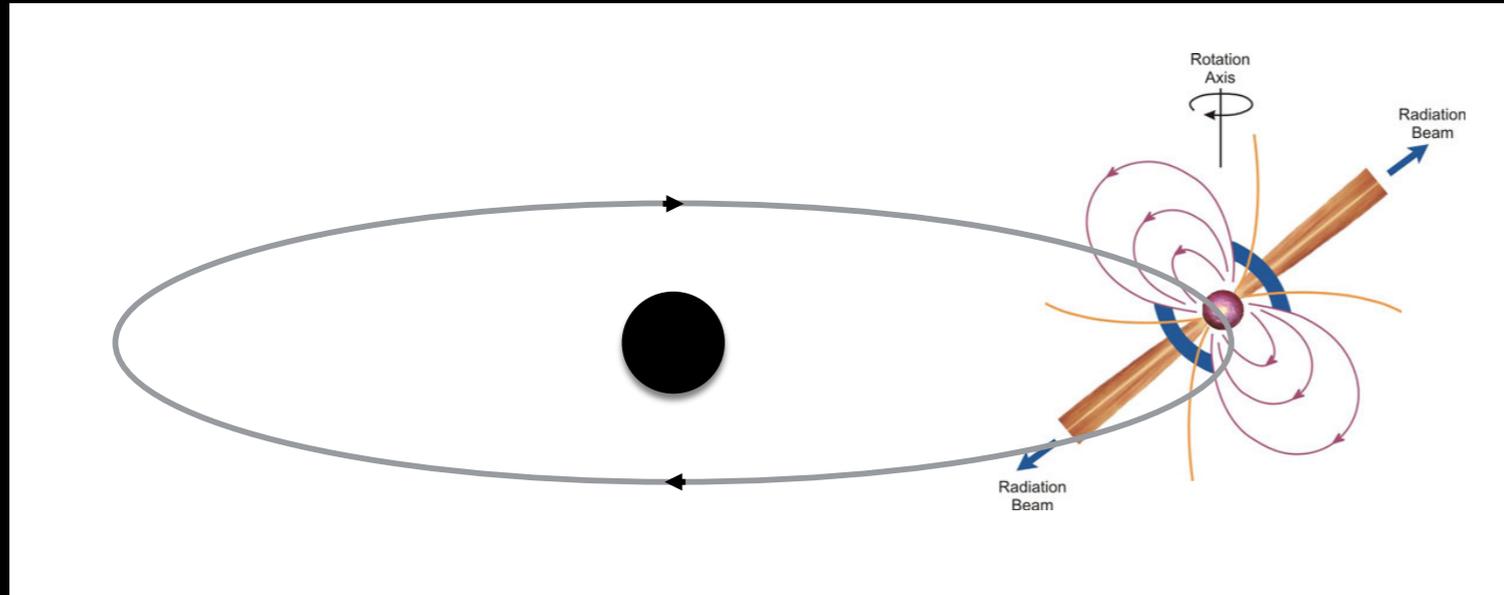

CMB has only  $\ell \sim 10^3$   
or  $\sim 10^6$  modes

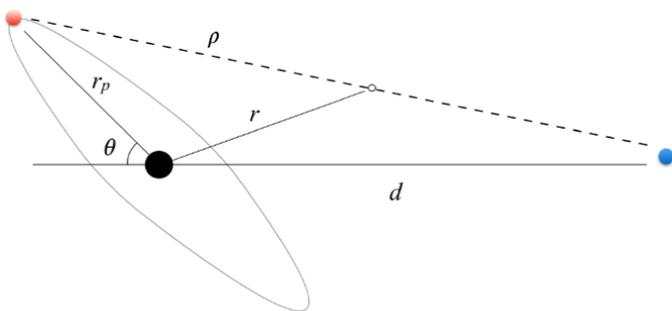

# Known Unknowns - rare stuff

## Observing non-violent non-locality in a binary system

$$M_{BH} = 3M_{\odot} :$$

$$M_{BH} = 30M_{\odot} :$$

$$M_{BH} = M_{SgrA*} \simeq 4 \times 10^6 M_{\odot} :$$

$$\sigma_{\Delta} \simeq 3 \times 10^{-5} \text{ s}$$

$$\sigma_{\Delta} \simeq 3 \times 10^{-4} \text{ s}$$

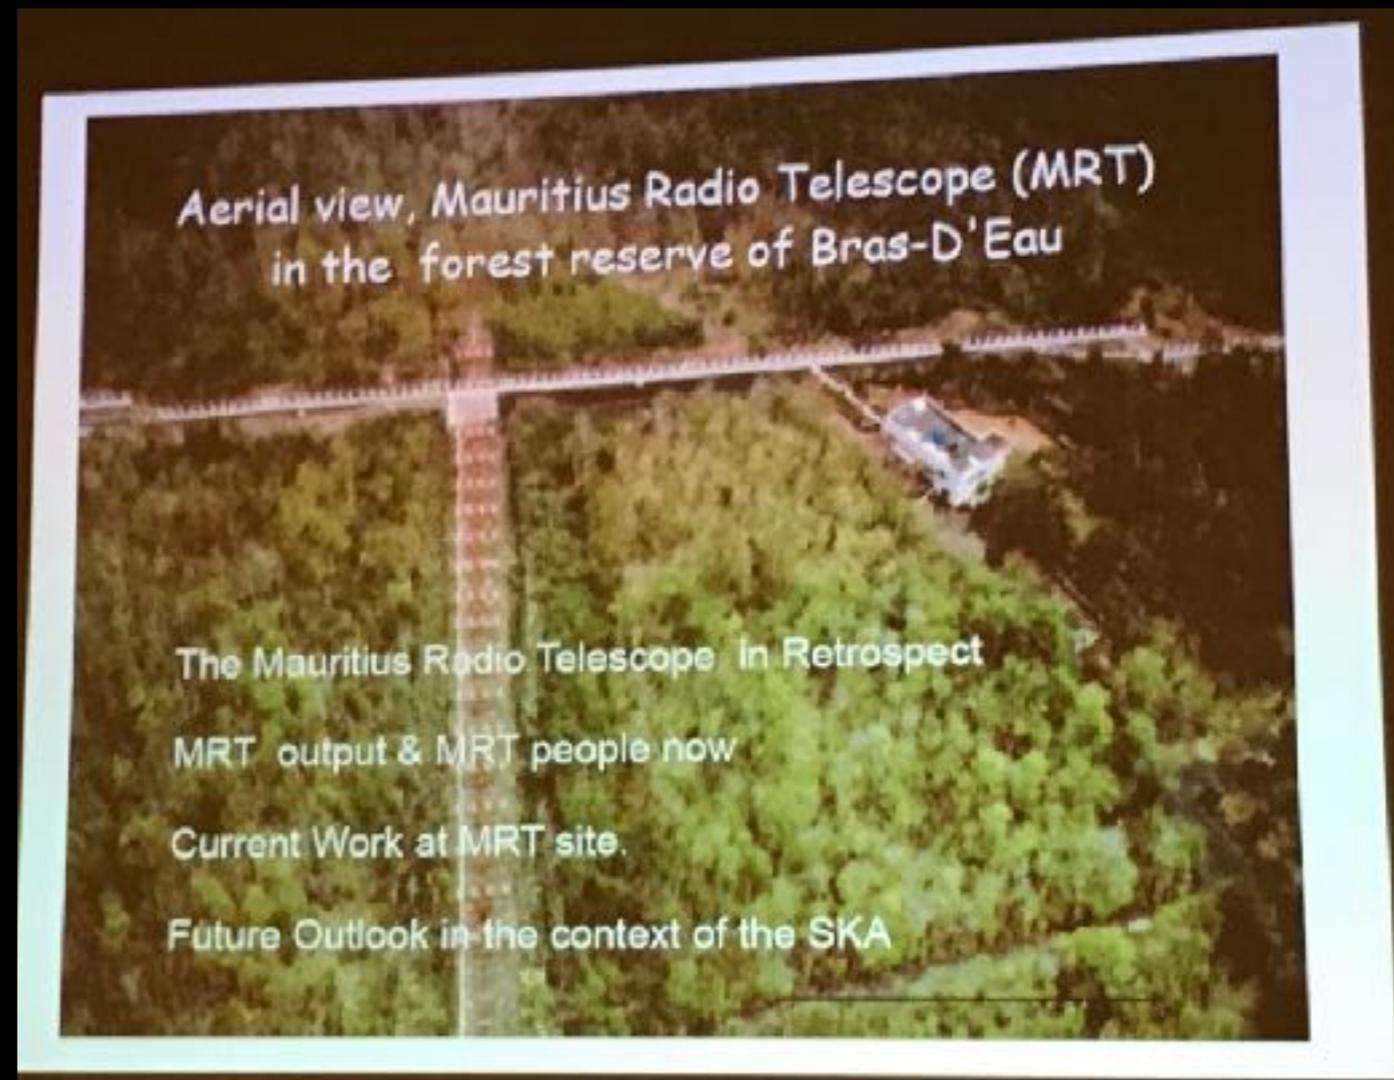

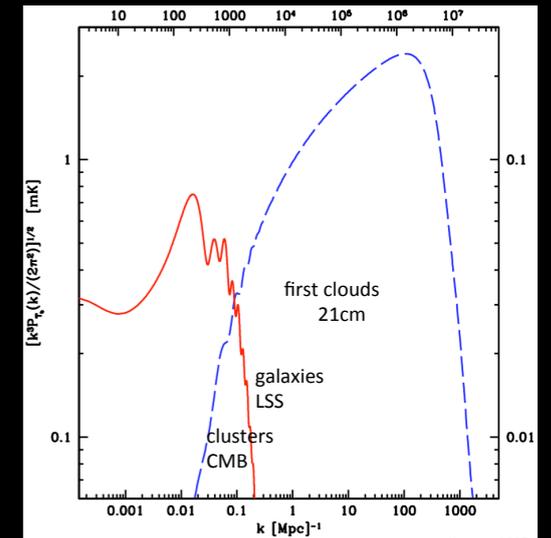

$$\sigma_{\Delta} \simeq 40 \text{ s.}$$

$$\sigma_{\Delta} \sim \kappa \frac{R_s}{c}$$

# Things learned

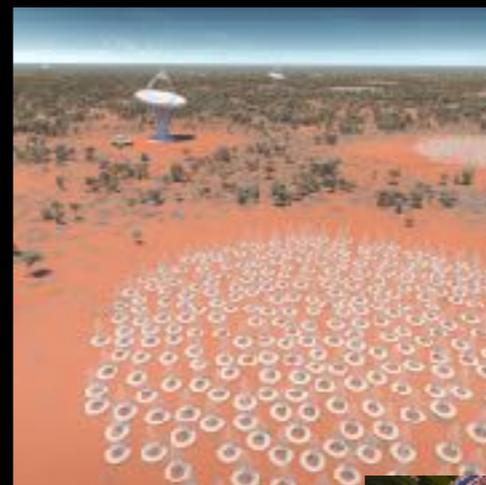

- ★ The return of the Primordial BHs as a TESTABLE DM candidate
- ★ The possibility of macro quantum gravity physics and TEST
- ★ The need for, and value of, synergetic approaches
- ★ The worth of cross-community meetings
  - ★ More theory - not telescopes?
- ★ Mauritius has/had a radio telescope and a radio astronomy heritage

# The SKA and us

- ★ Project vs Facility
- ★ transients vs statistics

# The SKA and us

---

- ★ Project vs Facility
  - ★ transients vs statistics
- ★ The need for cross-community engagement
  - ★ SKA construction shortfall
  - ★ the LHC model

# The SKA and us

- ★ Project vs Facility
- ★ transients vs statistics
- ★ The need for cross-community engagement
- ★ SKA construction shortfall
- ★ the LHC model
- ★ Do we need to wait 20 years?
- ★ the strength of the pathfinders and precursors

# The SKA and us

- ★ Project vs Facility
  - ★ transients vs statistics
- ★ The need for cross-community engagement
  - ★ SKA construction shortfall
  - ★ the LHC model
- ★ Do we need to wait 20 years?
  - ★ the strength of the pathfinders and precursors
- ★ We need to be designers and builders - not just users - and that goes for all players!
